

ZCU102 Evaluation Board

User Guide

UG1182 (v1.5) January 11, 2019

Revision History

The following table shows the revision history for this document.

Date	Version	Revision
01/11/2019	1.5	Changed DDR4 72-bit to DDR4 64-bit in Figure 1-1 and PS-Side: DDR4 SODIMM Socket in Chapter 3 . Removed ECC from Board Features . Updated Table 2-1 , callout 2, with DDR4 SODIMM and updated the Micron part number (MTA4ATF51264HZ-2G6E1). Updated Markings .
10/04/2018	1.4	<ul style="list-style-type: none">Updated Figure 2-1 and Figure 2-2.Added Electrostatic Discharge Caution in Chapter 2.Updated schematic number in Table 2-1.Updated SFP0-SFP3 functions in Table 2-3.Updated callout in Cooling Fan Connector in Chapter 3.Updated descriptions in PS-Side: DDR4 SODIMM Socket and PL-Side: DDR4 Component Memory in Chapter 3.Updated Ports 0 and 4 I2C address in Table 3-23.Added Note in SFP/SFP+ Connector in Chapter 3.Updated Bank info in SFP+ in Chapter 3.Updated I/O Standard for AE5 and AF5 in Table 3-52.Updated Appendix B, Xilinx Design Constraints.Updated Appendix C, Regulatory and Compliance Information.Updated XTP433 and XTP435 links and added DS925 and ZCU102 Design Hub link in Appendix D, Additional Resources and Legal Notices.
08/02/2017	1.3	Updated logic cell and CLB flip-flop resource count in Table 1-1 . Added Note 2 to Table 2-2 . Changed maximum PL internal supply voltage from 0.875V to 0.876V in Table 3-1 . Updated GTR_REF_CLK_USB3 frequency in Table 3-12 . Added I2C addresses to Table 3-23 and Table 3-24 . Clarified third paragraph under HDMI Clock Recovery in Chapter 3 .
03/20/2017	1.2	Added notes to Dimensions in Chapter 1 . Updated SW6 default switch setting in Table 2-2 and SD configuration setting in Table 2-4 . Clarified SW6[4:1] boot mode pin settings under Quad-SPI and SD in Chapter 2 . Changed "DDR SODIMM Memory J1" heading to "DDR Component Memory" in Table 3-4 . Changed PS_REF_CLK frequency from 33 MHz to 33.33 MHz in Table 3-12 . Changed "UART2_RTS_O_B" to "UART2_CTS_O_B" in Table 3-16 . Replaced Figure 3-16 . Changed "QSPI119 (LWR), U120 (UPR)" heading to "MSP430 U41" in Figure 3-17 . Clarified references to Figure 3-17 in Table 3-19 and Table 3-20 . Added addresses to titles in Table 3-21 and Table 3-22 and headings in Table 3-23 and Table 3-24 . Changed "22" to "L22" in Table 3-28 . Updated GTH connectivity for Quad 128, Quad 228, Quad 229, and Quad 23 under GTH Transceivers in Chapter 3 . Updated bank assignments in Figure 3-35 . Added callout 44 to Switches in Chapter 3 . Updated Xilinx websites in Appendix D, Additional Resources and Legal Notices .

Date	Version	Revision
11/16/2016	1.1	Updated device part number from XCZU9EG-2FFVB1156 to XCZU9EG-2FFVB1156I throughout document. Updated board photos (Figure 2-1 and Figure 2-2) to rev 1.0. Updated Table 2-1 and Table 2-3 . Updated Component Descriptions in Chapter 3 . Updated Appendix B, Xilinx Design Constraints .
05/11/2016	1.0	Initial Xilinx release - limited distribution.

Introduction

Overview

The ZCU102 is a general purpose evaluation board for rapid-prototyping based on the Zynq® UltraScale+™ XCZU9EG-2FFVB1156E MPSoC (multiprocessor system-on-chip). High speed DDR4 SODIMM and component memory interfaces, FMC expansion ports, multi-gigabit per second serial transceivers, a variety of peripheral interfaces, and FPGA logic for user customized designs provides a flexible prototyping platform.

Block Diagram

The ZCU102 board block diagram is shown in [Figure 1-1](#). Page numbers in the block diagram reference the corresponding page number(s) of schematic 0381701.

X16522-122118

Figure 1-1: ZCU102 Evaluation Board Block Diagram

Board Features

The ZCU102 evaluation board features are listed here. Detailed information for each feature is provided in [Chapter 3, Board Component Descriptions](#).

- XCZU9EG-2FFVB1156E MPSoC
- PL V_{CCINT} for range in datasheet
- Form factor for PCIe Gen2x4 Host, Micro-ATX chassis footprint
- Configuration from QSPI
- Configuration from SD card
- Configuration over JTAG with PC4 header
- Configuration over JTAG with Arm 20-pin header
- Configuration over USB-to-JTAG Bridge
- Clocks (PL-system, PS_CLK, Programmable Clock, SMA, SMA_GT_REF, Ethernet, USB)
- PS DDR4 64-bit SODIMM
- PL DDR4 component (16-bit)
- PS GTR assignment
 - SATA
 - DisplayPort
 - USB3
 - PCIe Gen2x4 Root Port
- PL GTH assignment
 - FMC #1 (8 GTH) and FMC #2 (8 GTH) PL GT assignment
 - HDMI (3 GTH) PL GT assignment
 - SFP+ (4 GTH) PL GT assignment
 - SMA (1 GTH) PL GT assignment
- PL FMC HPC #1 Connectivity - Full LA Bus
- PL FMC HPC #2 Connectivity - Partial LA Bus
- PS MIO: QSPI
- PS MIO: Ethernet
- PS MIO: USB2 (same connector as USB3)
- PS MIO: SD

- PS MIO: CAN
- PS MIO: UART (using USB-to-UART bridge)
- PS MIO: second UART
- PS MIO: I2C shared across PS and PL
- PS/PL EMIO: Trace
- PL-side UART
- PL-side LEDs (8)
- PL-side DIP switch (8-position)
- PL-side pushbuttons (5)
- PS-side pushbutton (1)
- PS-side LED (1)
- System user switches (PROG, CPU Reset)
- PjTAG
- Security - PSBATT button battery backup
- SYSMON
- Operational switches (Power on/off, PROG, Boot mode)
- Operational status LEDs (power supply status, INIT, DONE, PG, JTAG status, DDR power good)
- Power Management

The ZCU102 evaluation board provides designers a rapid prototyping platform using the XCZU9EG-2FFVB1156E device. The ZU9EG contains many useful processor system (PS) hard block peripherals exposed through the Multi-use I/O (MIO) interface and a variety of FPGA programmable logic (PL), high-density (HD) and high-performance (HP) banks. [Table 1-1](#) lists a brief summary of the resources available within the ZU9EG. A feature set overview, description, and ordering information is provided in the *Zynq UltraScale+ MPSoC Data Sheet: Overview* (DS891) [\[Ref 1\]](#).

Table 1-1: Zynq UltraScale+ MPSoC ZCU9EG Features and Resources

Feature	Resource Count
HD banks	5 banks, total of 120 pins
HP banks	4 banks, total of 208 pins
MIO banks	3 banks, total of 78 pins
PS-side GTR 6 Gb/s transceivers	4 PS-GTRs
PL-side GTH 16.3 Gb/s transceivers	24 GTHs
Logic cells	599,550

Table 1-1: Zynq UltraScale+ MPSoC ZCU9EG Features and Resources (Cont'd)

Feature	Resource Count
CLB flip-flops	548,160
Max. distributed RAM	8.8 Mb
Total block RAM	32.1 Mb
DSP slices	2,520

Board Specifications

Dimensions

Width: 9.350 in. (23.749 cm)

Length: 9.600 in. (24.384 cm)

Thickness: 0.104 in. (0.2642 cm)

Notes:

- A 3D model of this board is not available.
- ZCU102 board documentation (xdc listing, schematics, layout files and board outline/fab drawings, etc.) is available on the web at www.xilinx.com/zcu102.

Environmental

Temperature

Operating: 0°C to +45°C

Storage: -25°C to +60°C

Humidity

10% to 90% non-condensing

Operating Voltage

+12 V_{DC}

Board Setup and Configuration

Board Component Location

Figure 2-1 shows the ZCU102 board component locations. Each numbered component shown in Figure 2-1 is keyed to Table 2-1. Table 2-1 identifies the components, references the respective schematic page numbers, and links to a detailed functional description of the components and board features in Chapter 3.

IMPORTANT: *Figure 2-1 is for visual reference only and might not reflect the latest revision of the board. (This user guide documents ZCU102 Rev. 1.0 and later.)*

IMPORTANT: *There could be multiple revisions of this board. The specific details concerning the differences between revisions is not captured in this document. This document is not intended to be a reference design guide and the information herein should not be used as such. Always refer to the schematic and xdc of the specific ZCU102 version of interest for such details.*

Electrostatic Discharge Caution

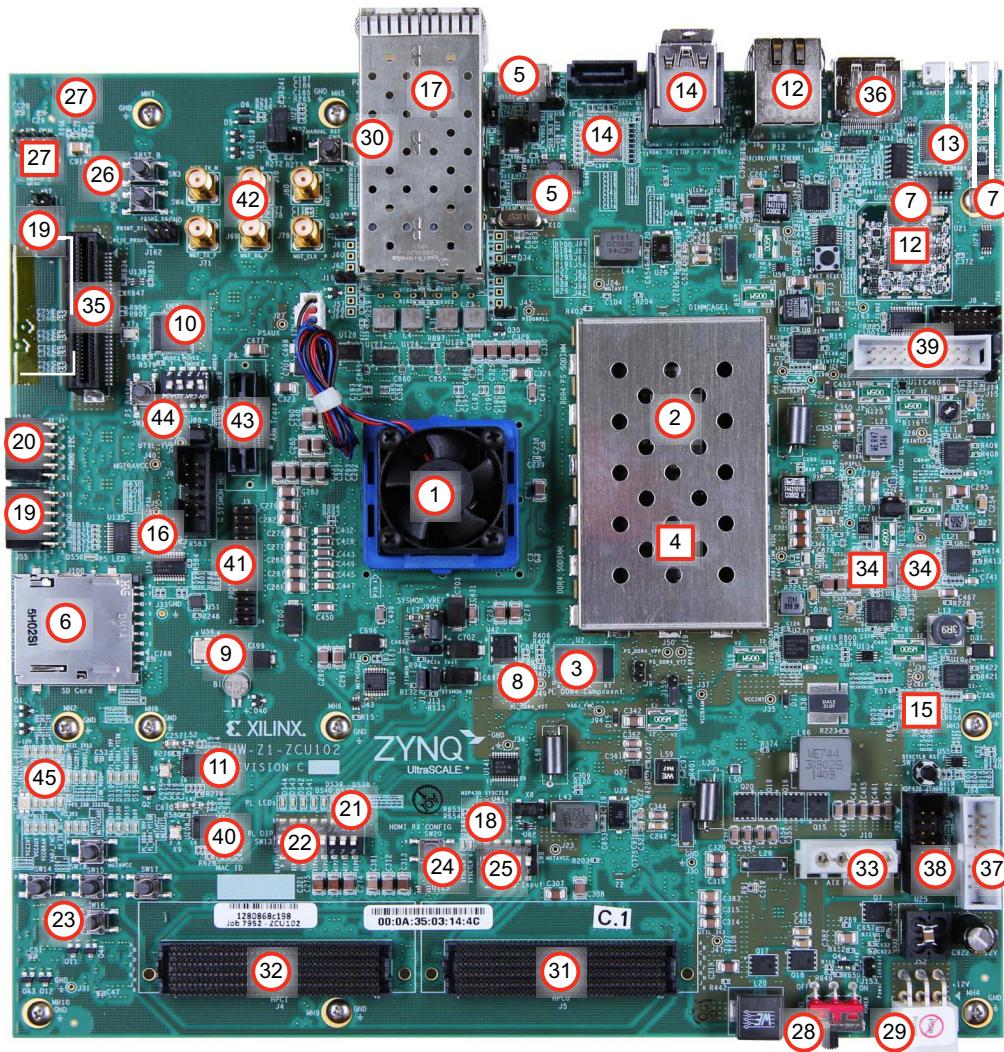

CAUTION! *ESD can damage electronic components when they are improperly handled, and can result in total or intermittent failures. Always follow ESD-prevention procedures when removing and replacing components.*

To prevent ESD damage:

- Use an ESD wrist or ankle strap and ensure that it makes skin contact. Connect the equipment end of the strap to an unpainted metal surface on the chassis.
- Avoid touching the adapter against your clothing. The wrist strap protects components from ESD on the body only.
- Handle the adapter by its bracket or edges only. Avoid touching the printed circuit board or the connectors.
- Put the adapter down only on an antistatic surface such as the bag supplied in your kit.

- If you are returning the adapter to Xilinx Product Support, place it back in its antistatic bag immediately.

00 Round callout references a component
On the front side of the board

00 Square callout references a component

J9	PS_DDR4_VPP_2V5 power inhibit (U39) • OFF: rail powers on normally • 1-2: PS_DDR4_VPP_2V5 OFF	OFF	25	77
J164	MSP430 firmware upgrade header	OFF	26	38

MPSOC Device Configuration

Zynq UltraScale+ XCZU9EG MPSOC devices use a multi-stage boot process documented in the Boot and Configuration chapter of the *Zynq UltraScale+ MPSOC Technical Reference Manual* (UG1085) [Ref 3].

Switch SW6 configuration option settings are identified in [Table 2-4](#).

Table 2-4: Switch SW6 Configuration Option Settings

Boot Mode	Mode Pins [3:0]	Mode SW6 [4:1]
JTAG	0000	on, on, on, on
QSPI32	0010 ⁽¹⁾	on, on, off, on
SD	1110	off, off, off, on

Notes:

1. Default switch setting.
2. For this DIP switch, in relation to the arrow, moving the switch toward the label ON is a 0. DIP switch labels 1 through 4 are equivalent to Mode pins 0 through 3.

JTAG

Vivado, SDK, or third-party tools can establish a JTAG connection to the Zynq UltraScale+ MPSOC through one of the three provided JTAG interfaces:

1. Xilinx platform USB or cable PC4 connector (J8)
2. Arm 20-pin JTAG connector (J6)
3. Digilent SMT2.5 USB-to-JTAG module with off-module micro-USB connector (J2)

Quad-SPI

Booting from the dual Quad-SPI nonvolatile configuration memory is accomplished by storing a valid Zynq UltraScale+ MPSOC boot image into the Quad-SPI flash devices connected to the MIO Quad-SPI interface, setting the boot mode pins SW6 [4:1] = QSPI32 (see [Table 2-4](#)), then either power-cycling or pressing the power-on reset (POR) pushbutton. SW6 is callout 23 in [Figure 2-1](#).

SD

Booting from an SD card is accomplished by storing a valid Zynq UltraScale+ MPSOC boot image file onto an SD card (plugged into SD socket J100) connected to the MIO SD interface, setting the boot mode pins SW6 [4:1] = SD (see [Table 2-4](#)), then either power-cycling or pressing the power-on reset (POR) pushbutton.

See the *Zynq UltraScale+ MPSOC Technical Reference Manual* (UG1085) [Ref 3] for more information about Zynq UltraScale+ MPSOC configuration options.

Board Component Descriptions

Overview

This chapter provides a detailed functional description of the board's components and features. [Table 2-1](#) identifies the components, references the respective schematic page numbers, and links to the corresponding detailed functional description in this chapter. Component locations are shown in [Figure 2-1](#).

Component Descriptions

Zynq UltraScale XCZU9EG MPSoC

[[Figure 2-1](#), callout 1]

The ZCU102 board is populated with the Zynq UltraScale+ XCZU9EG-2FFVB1156E MPSoC which combines a powerful processing system (PS) and user-programmable logic (PL) into the same device. The processing system in a Zynq UltraScale+ MPSoC features the Arm® flagship Cortex®-A53 64-bit quad-core processor and Cortex-R5 dual-core real-time processor.

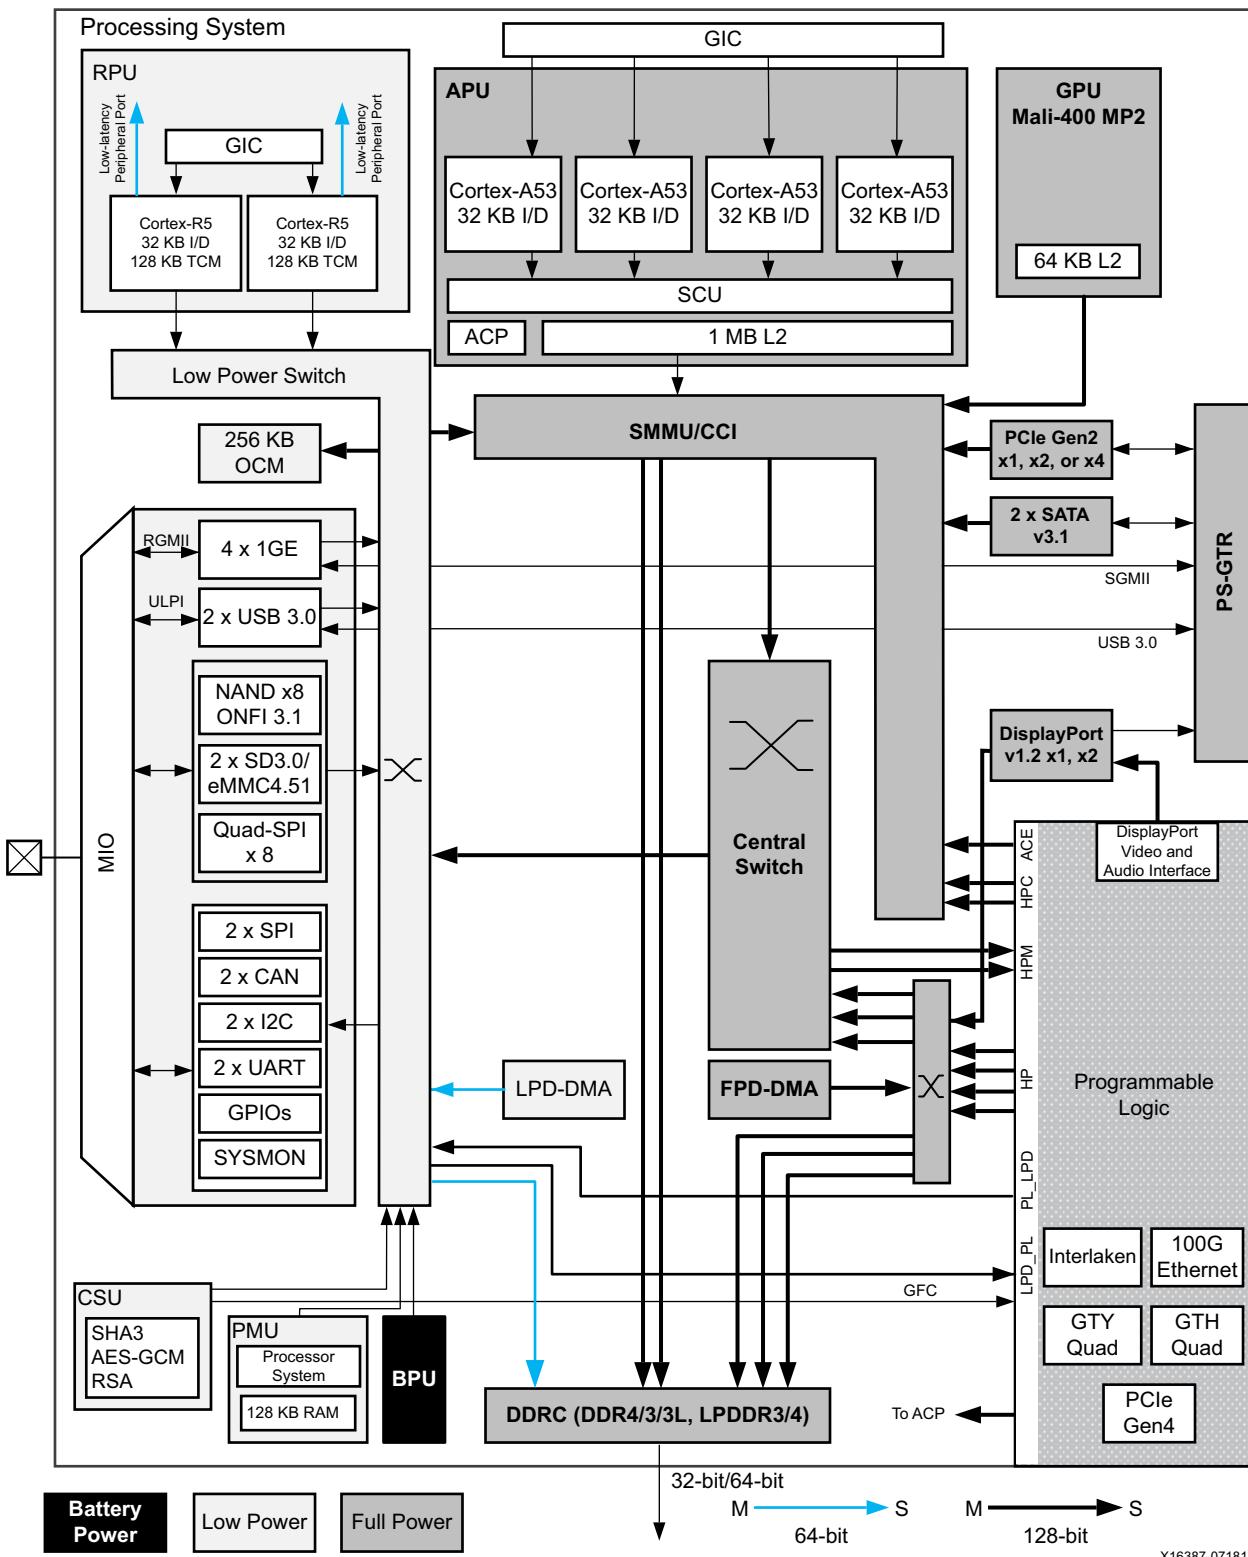

Production ZCU102 Evaluation boards will ship with -2 speed grade devices. Support of multiple speed grades requires voltage adjustments.

The PL-side V_{CCINT} supply will be user adjustable via PMBUS with the voltage ranges shown in [Table 3-1](#) to support multiple Zynq UltraScale+ MPSoC speed grades.

Table 3-1: Recommended Operating Conditions

Symbol	Description	Min.	Typ.	Max.	Units
Programmable Logic (PL)					
V_{CCINT}	PL internal supply voltage.	0.825	0.850	0.876	V
	For -1LI and -2LE ($V_{CCINT} = 0.72V$) devices: PL internal supply voltage.	0.698	0.720	0.742	V
	For -3E devices: PL internal supply voltage.	0.873	0.900	0.927	V

The top-level block diagram is shown in [Figure 3-1](#).

[Figure 3-1: Zynq UltraScale+ MPSoC Top-Level Block Diagram](#)

The Zynq UltraScale+ MPSoC PS block has three major processing units:

- Cortex-A53 application processing unit (APU)-Arm v8 architecture-based 64-bit quad-core multiprocessing CPU.
- Cortex-R5 real-time processing unit (RPU)-Arm v7 architecture-based 32-bit dual real-time processing unit with dedicated tightly coupled memory (TCM).
- Mali-400 graphics processing unit (GPU)-graphics processing unit with pixel and geometry processor and 64 KB L2 cache.

The Zynq UltraScale+ MPSoC PS has four high-speed serial I/O (HSSIO) interfaces supporting the following protocols:

- Integrated block for PCI Express® interface-PCIe™ base specification version 2.1 compliant.
- SATA 3.1 specification compliant interface.
- DisplayPort interface-implements a DisplayPort source-only interface with video resolution up to 4K x 2K-30 (300 MHz pixel rate).
- USB 3.0 interface-compliant to USB 3.0 specification implementing a 5 Gb/s line rate.
- Serial GMII interface-supports a 1 Gb/s SGMII interface.

The PS and PL can be coupled with multiple interfaces and other signals to effectively integrate user-created hardware accelerators and other functions in the PL logic that are accessible to the processors. They can also access memory resources in the processing system. The PS I/O peripherals, including the static/flash memory interfaces share a multiplexed I/O (MIO) of up to 78 MIO pins. Zynq UltraScale+ MPSoCs can also use the I/O in the PL domain for many of the PS I/O peripherals. This is done through an extended multiplexed I/O interface (EMIO).and boots at power-up or reset.

For additional information on Zynq UltraScale+ MPSoC devices, see the *Zynq UltraScale+ MPSoC Data Sheet: Overview* (DS891) [\[Ref 1\]](#), and the *Zynq UltraScale+ MPSoC Technical Reference Manual* (UG1085) [\[Ref 3\]](#) for more information about Zynq UltraScale+ MPSoC configuration options.

Encryption Key Backup Circuit

The XCZU9EG MPSoC U1 implements bitstream encryption key technology. The ZCU102 board provides the encryption key backup battery circuit shown in [Figure 3-2](#)

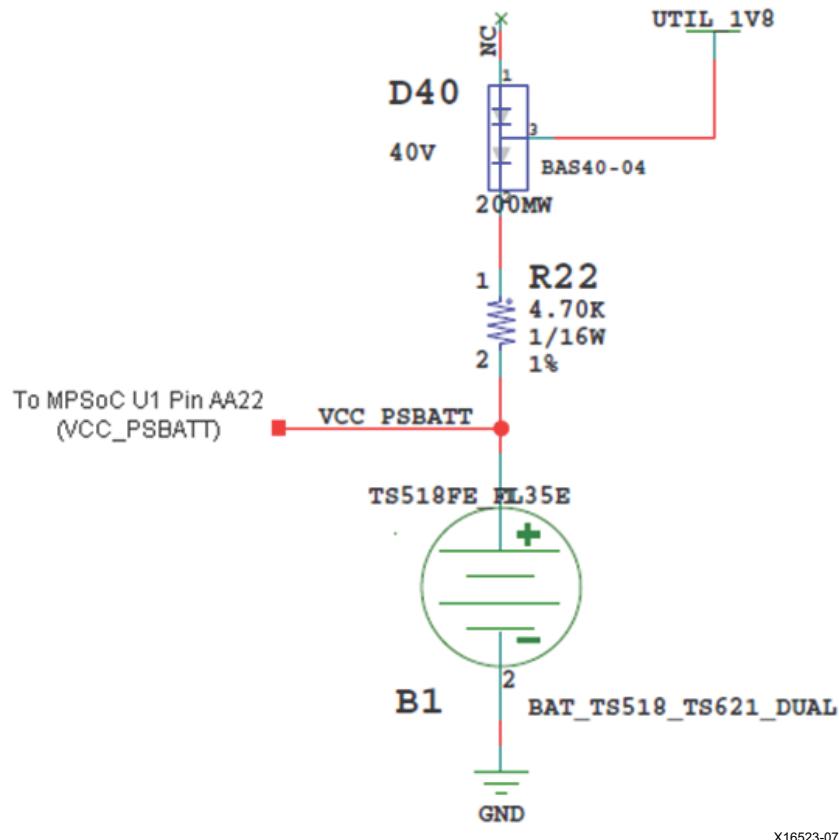

Figure 3-2: Encryption Key Backup Circuit

The Seiko TS518FE rechargeable 1.5V lithium button-type battery B1 is soldered to the board with the positive output connected to the XCZU9EG MPSoC U1 V_{CC_PSBATT} pin AA22. The battery supply current I_{BATT} specification is 150 nA maximum when board power is off. B1 is charged from the UTIL_1V8 1.8V rail through a series diode with a typical forward voltage drop of 0.38V and 4.7 ΩK current limit resistor. The nominal charging voltage is 1.42V.

I/O Voltage Rails

There are nine PL I/O banks available on the XCZU9EG MPSoC. The voltages applied to the XCZU9EG MPSoC I/O banks used by the ZCU102 board are listed in [Table 3-2](#).

Table 3-2: I/O Voltage Rails

XCZU9EG	Power Net Name	Voltage	Connected To
PL Bank 0	NA	NA	MPSoC Configuration Bank 0
PL Bank 44	V _{CC3V3}	3.3V	GPIO DIP SW, PB SW, LEDs, 74.25 MHz CLK
PL Bank 47	V _{CC3V3}	3.3V	GPIO PMOD0 (RT-ANG. FEMALE), PMOD1 (STR. MALE), PL I2C1, TRACEDATA, 125 MHz CLK
PL Bank 48	V _{CC3V3}	3.3V	TRACEDATA
PL Bank 49	V _{CC3V3}	3.3V	HDMI Codec, SYSMON I2C, SFP CTRL, UART2, MSP430 UCA1
PL Bank 50	V _{CC3V3}	3.3V	HDMI Codec, MSP430 GPIO, PL I2C0, PROTO. HDR. IO
PL Bank 64	V _{CC1V2}	1.2V	DDR4 DQ[0:15], DDR4 ADDR/CTRL, USER_SI570 CLK
PL Bank 65	V _{ADJ_FMC} ⁽¹⁾	1.8V	FMC_HPC1 LA BUS, HDMI TX
PL Bank 66	V _{ADJ_FMC} ⁽¹⁾	1.8V	FMC_HPC0 LA BUS, HDMI REC CLK
PL Bank 67	V _{ADJ_FMC} ⁽¹⁾	1.8V	FMC_HPC0 LA BUS, SFP REC CLK
PS Bank 500	V _{CCOPS}	1.8V	QSPI LWR, QSPI UPR, UART1, MIO_I2C0, MIO_I2C1, MIO_RXD/TXD, CAN IF
PS Bank 501	V _{CCOPS}	1.8V	MIO_SD IF, MIO_PMU IF, MIO_DP IF
PS Bank 502	V _{CCOPS}	1.8V	MIO_ENET, MIO_USB
PS Bank 503	V _{CCOPS3}	1.81V	PS CONFIGURATION IF
PS DDR Bank 504	V _{CCO_PSDDR_504}	1.2V	DDR4 SODIMM IF

Notes:

1. The ZCU102 board is shipped with V_{ADJ_FMC} set to 1.8V by the MSP430 system controller.

PS-Side: DDR4 SODIMM Socket

[Figure 2-1, callout 2]

The PS-side memory is wired to the Zynq UltraScale+ DDRC hard memory controller. The PS-side memory interface supports a 260-pin DDR4 SODIMM socket J1. The ZCU102 is shipped with a DDR4 SODIMM installed:

- Manufacturer: Micron
- Part Number: MTA4ATF51264HZ-2G6E1
- Description:
 - 4 GB DDR4 SODIMM, 260-pin
 - Single Rank x16
 - 512 Mbit x 64-bit
 - Supports up to DDR4-2666

The ZCU102 XCZU9EG FFVB MPSoC PS DDR interface performance is documented in the *Zynq UltraScale+ MPSoC Data Sheet: DC and AC Switching Characteristics* (DS925) [Ref 2].

The ZCU102 supports full power-off suspend mode where only the system controller and the PS-side DDR4 SODIMM memory are powered. The DDR4 memory is kept in a self-refresh state and has its reset input controlled by the system controller such that the memory is not reset when waking-up from suspend mode. DDR4 SODIMM standard right angle Socket J1 connections are identified in Table 3-3.

The ZCU102 DDR4 SODIMM interface adheres to the constraints guidelines documented in the PCB Guidelines for DDR4 section of *UltraScale Architecture PCB Design Guide* (UG583) [Ref 4]. The ZCU102 DDR4 SODIMM interface is a 40Ω impedance implementation. Other memory interface details are also available in the *UltraScale Architecture FPGAs Memory Interface Solutions Guide* (PG150) [Ref 5].

PL-Side: DDR4 Component Memory

[Figure 2-1, callout 3]

The 4 Gb, 16-bit wide DDR4 memory system is comprised of one 256 Mb x 16 SDRAM at U2.

- Manufacturer: Micron
- Part Number: MT40A256M16GE-075E
- Description:
 - 4 Gb (256 Mb x16)
 - 1.2V 96 ball TFBGA
 - DDR4-2666

The ZCU102 XCZU9EG FFVB MPSoC PL DDR interface performance is documented in the *Zynq UltraScale+ MPSoC Data Sheet: DC and AC Switching Characteristics* (DS925) [Ref 2].

This memory system is connected to the XCZU9EG device bank 64. The DDR4 0.6V VTT termination voltage (net DDR4_VTT) is sourced from the TI TPS51200DR linear regulator U35. The connections between the DDR4 component memory and XCZU9EG device bank 64 are listed in Table 3-4.

Table 3-4: DDR4 Component Memory Connection to the XCZU9EG MPSoC

Quad-SPI Flash Memory (MIO 0–12)

[Figure 2-1, callout 4]

The Micron dual MT25QU512ABB8ESF serial NOR flash Quad-SPI memories are capable of holding the boot image for the MPSoC system. To achieve higher performance two Quad-SPI devices are connected in parallel and provide an 8-bit data bus for booting and configuration. This interface is used to support QSPI32 boot mode as defined in the *Zynq UltraScale+ MPSoC Technical Reference Manual* (UG1085) [Ref 3].

The dual Quad-SPI flash memory located at U119/U120 provides 1 Gb of non-volatile storage that can be used for configuration and data storage.

- Part number: MT25QU512ABB8ESF-0SIT (Micron)
- Supply voltage: 1.8V
- Datapath width: 8 bits
- Data rate: Various depending on Single/Dual/Quad mode

The connections between the SPI flash memory and the XCZU9EG MPSoC are listed in Table 3-6.

Table 3-6: Quad-SPI Component Connections to FPGA U1

XCZU9EG (U1) Pin	Net Name	Quad-SPI U119 (LWR), U120 (UPR)	
		Pin Number	Pin Name
AH16	MIO4_QSPI_LWR_DQ0	15	DQ0
AJ16	MIO1_QSPI_LWR_DQ1	8	DQ1
AD16	MIO2_QSPI_LWR_DQ2	9	DQ2_WP_B
AG16	MIO3_QSPI_LWR_DQ3	1	DQ3_RST_HOLD_B
AF16	MIO0_QSPI_LWR_CLK	16	C

AJ17	MIO12_QSPI_UPR_CLK	16	C
AD17	MIO7_QSPI_UPR_CS_B	7	S_B

The configuration and Quad-SPI section of the *Zynq UltraScale+ MPSoC Technical Reference Manual* (UG1085) [Ref 3] provides details on using the Quad-SPI flash memory. For more QSPI details, see the Micron MT25QU512ABB8ESF-0SIT data sheet at the Micron website [Ref 15].

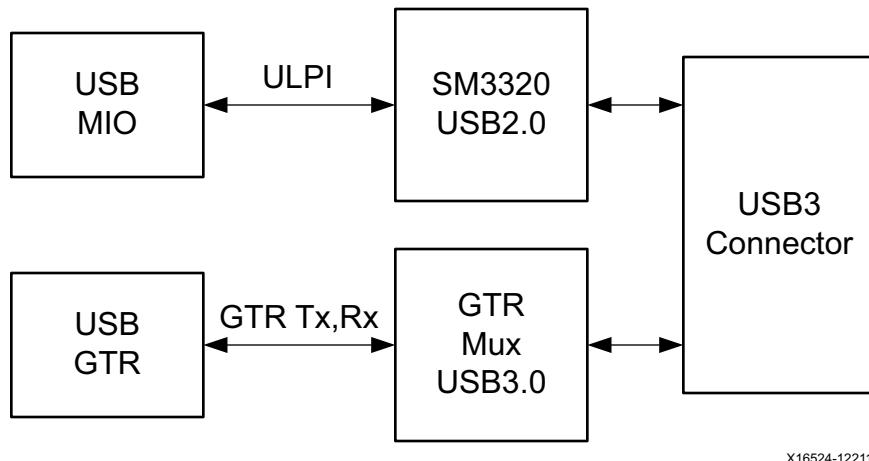

USB0 (MIO 52-63)

The USB interface on the PS-side serves multiple roles as a host, device, and OTG controller. The USB 3.0 interface is supported by the MPSoC GTR interface while the USB 2.0 capabilities of the SMSC USB3320C controller are shared on a common USB 3.0 micro USB type AB connector (J96).

USB 3.0 Transceiver and USB 2.0 ULPI PHY

[Figure 2-1, callout 5]

The ZCU102 board uses a Standard Microsystems Corporation USB3320 USB 2.0 ULPI Transceiver at U116 to support a USB connection to the host computer (see Figure 3-3). A USB cable is supplied in the ZCU102 Evaluation Kit (standard-A connector to host computer, micro-B connector to ZCU102 board connector J96). The USB3320 is a high-speed USB 2.0 PHY supporting the UTMI+ low pin interface (ULPI) interface standard. The ULPI standard defines the interface between the USB controller IP and the PHY device which drives the physical USB bus. Use of the ULPI standard reduces the interface pin count between the USB controller IP and the PHY device.

X16524-122118

Figure 3-3: USB Interface

The USB3320 is clocked by a 24 MHz crystal. Consult the Standard Microsystems Corporation (SMSC) USB3320 data sheet for clocking mode details [Ref 16].

The interface to the USB3320 PHY is implemented through the IP in the XCZU9EG MPSoC Processor System (PS).

[Table 3-7](#) describes the jumper settings for the USB 2.0 circuit. Bold text identifies the default shunt positions for USB 2.0 high speed on-the-go (OTG) mode.

Table 3-7: USB Jumper Settings

Header	Function	Shunt Position	Notes
J7	V _{BUS} 5V supply	Shunt ON = Host or OTG mode Shunt OFF = Device mode	
J113	RV _{BUS} select	Position 1-2 = Device mode (10 kΩ) Position 2-3 = OTG mode (1 kW)	Over voltage protection.
J110	CV _{BUS} select	Position 1-2 = OTG and Device mode (1 mF) Position 2-3 = Host mode (120 μF)	V _{BUS} load capacitance.
J109	Cable ID select	Position 1-2 = A/B cable detect Position 2-3 = ID not used	Used in OTG mode.
J112	USB Micro-B	Position 1-2 = Shield connected to GND Position 2-3 = Shield floating	

The connections between the USB 2.0 PHY at U116 and the XCZU9EG MPSoC are listed in [Table 3-8](#).

Table 3-8: USB 2.0 ULPI Transceiver Connections to the XCZU9EG MPSoC

XCZU9EG (U1) Pin	Net Name	USB3320 U116	
		Pin Number	Pin Name
U117.4 ⁽¹⁾	ULPIO_RST_B	27	RESET_B

E24	MIO60_USB_DATA4	7	DATA4
C24	MIO61_USB_DATA5	9	DATA5
G24	MIO62_USB_DATA6	10	DATA6
D24	MIO63_USB_DATA7	13	DATA7

Notes:

- PS_POR_B (U1.V23) or PS_MODE1 (DIP SW6.2) or PB SW2 drive U116 RST_B via OR gate U117.

Note that the shield for the USB 3.0 micro-B connector (J96) can be tied to GND by a jumper on header J96 pins 2-3 (default). The USB shield can optionally be connected through a

capacitor to GND by installing a capacitor (body size 0402) at location C887 and jumping pins 1-2 on header J112.

The USB3320 ULPI U116 transceiver circuit (see [Figure 3-4](#)) has a Micrel MIC2544 high-side programmable current limit switch (U121). This switch has an open-drain output fault flag on pin 2, which will turn on LED DS51 if overcurrent or thermal shutdown conditions are detected. DS51 is located in the U116 circuit area near push-button SW2 ([Figure 2-1](#), callout 5).

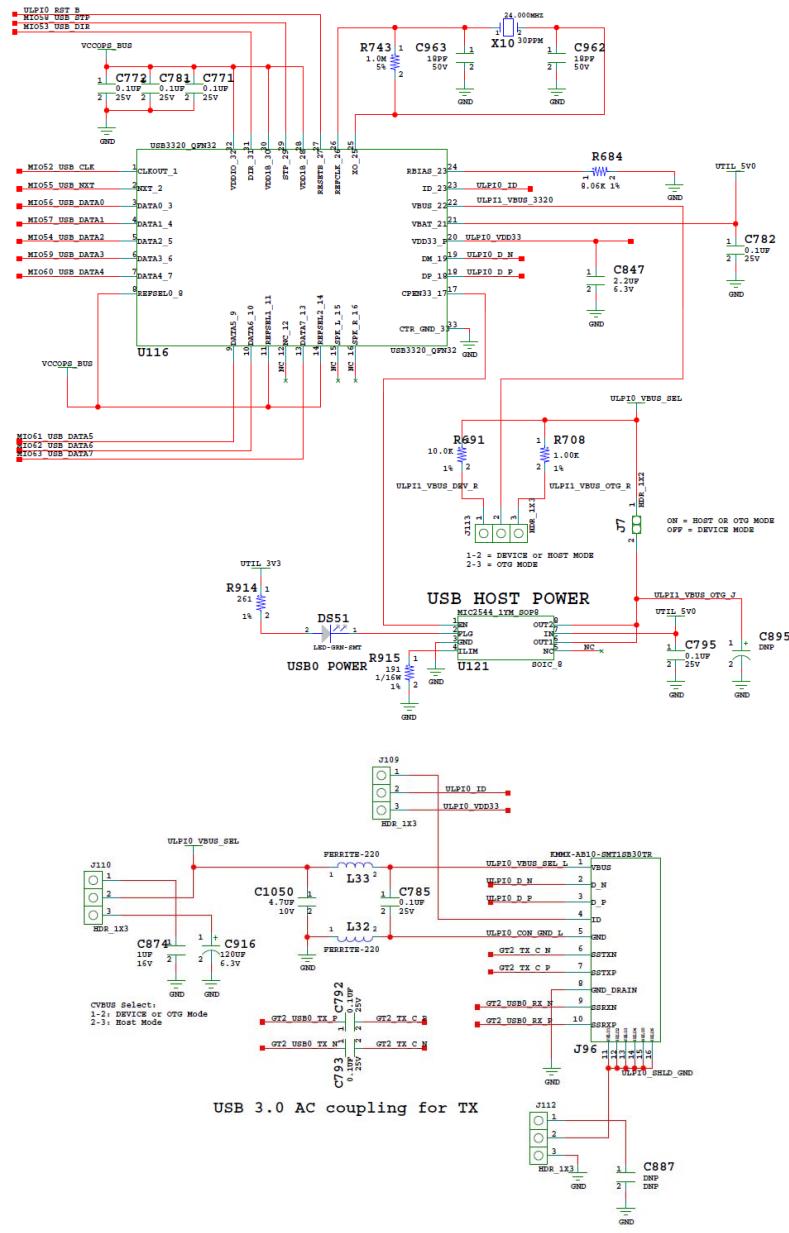

Figure 3-4: ULPI U116 Transceiver Circuit

SD1 (MIO 39-51)

A PS-side interface to an SD card connector is provided for booting and file system storage. This interface is used for the SD boot mode and supports SD3.0 access post boot.

SD Card Interface

[Figure 2-1, callout 6]

The ZCU102 board includes a secure digital input/output (SDIO) interface to provide access to general purpose non-volatile SDIO memory cards and peripherals. Information for the SD I/O card specification can be found at the SanDisk Corporation [\[Ref 17\]](#) or SD Association [\[Ref 18\]](#) websites. The ZCU102 SD card interface supports the SD1_LS configuration boot mode documented in the *Zynq UltraScale+ MPSoC Technical Reference Manual* (UG1085) [\[Ref 3\]](#).

The SDIO signals are connected to XCZU9EG MPSoC PS bank 501 which has its VCCMIO set to 1.8V. Each of the six MIOxx_SDIO_* nets has a series 30 ohm resistor at the source. An NXP IP4856CX25 SD 3.0-compliant voltage level-translator U133 is present between the XCZU9EG MPSoC and the SD card connector (J100). The NXP IP4856CX25 U133 device provides SD3.0 capability with SDR104 performance. The NXP SD3.0 level shifter is mounted on an Aries adapter board that has the pin mapping shown in [Table 3-9](#).

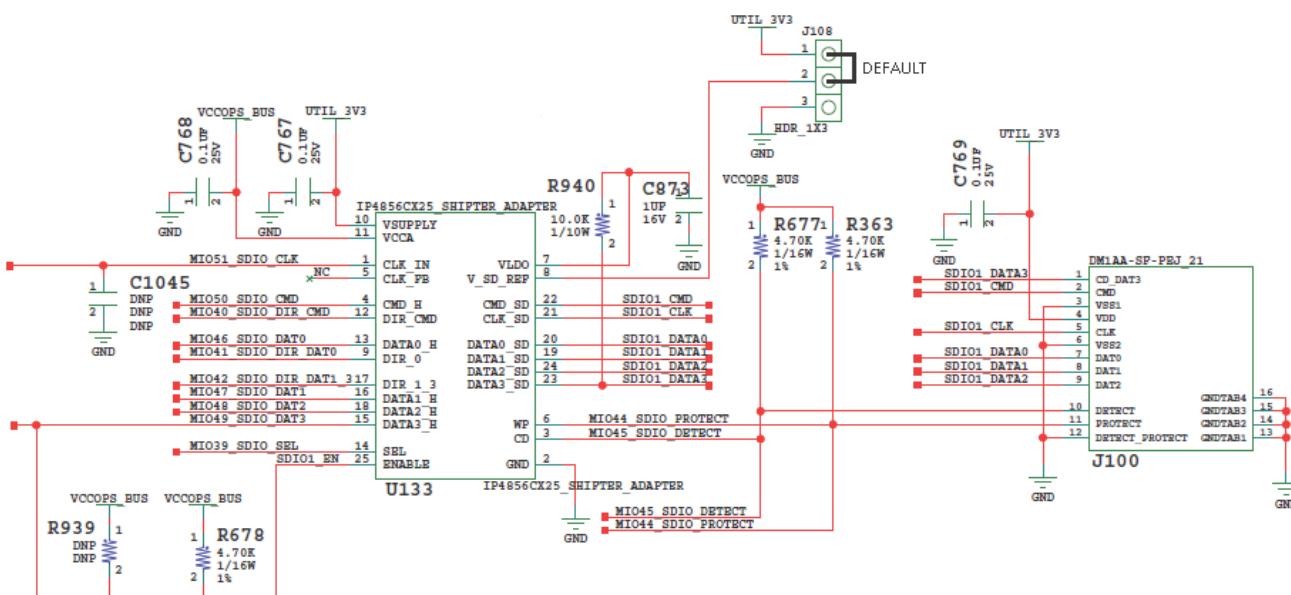

Table 3-9: U133 IP4856CX25 Adapter Pin-Out

Aries Adapter Pin Number	IP4856CX25 U133 Pin Number	IP4856CX25 U133 Pin Name

Programmable Logic JTAG Programming Options

[[Figure 2-1](#), callouts 7 and 39]

ZCU102 JTAG chain:

- J2 USB micro AB connector connected to U21 Digilent USB JTAG
- J8 2x7 2 mm shrouded, keyed JTAG pod flat cable connector
- J6 2x10 Arm JTAG male pin header

The ZCU102 board JTAG chain is shown in [Figure 3-6](#).

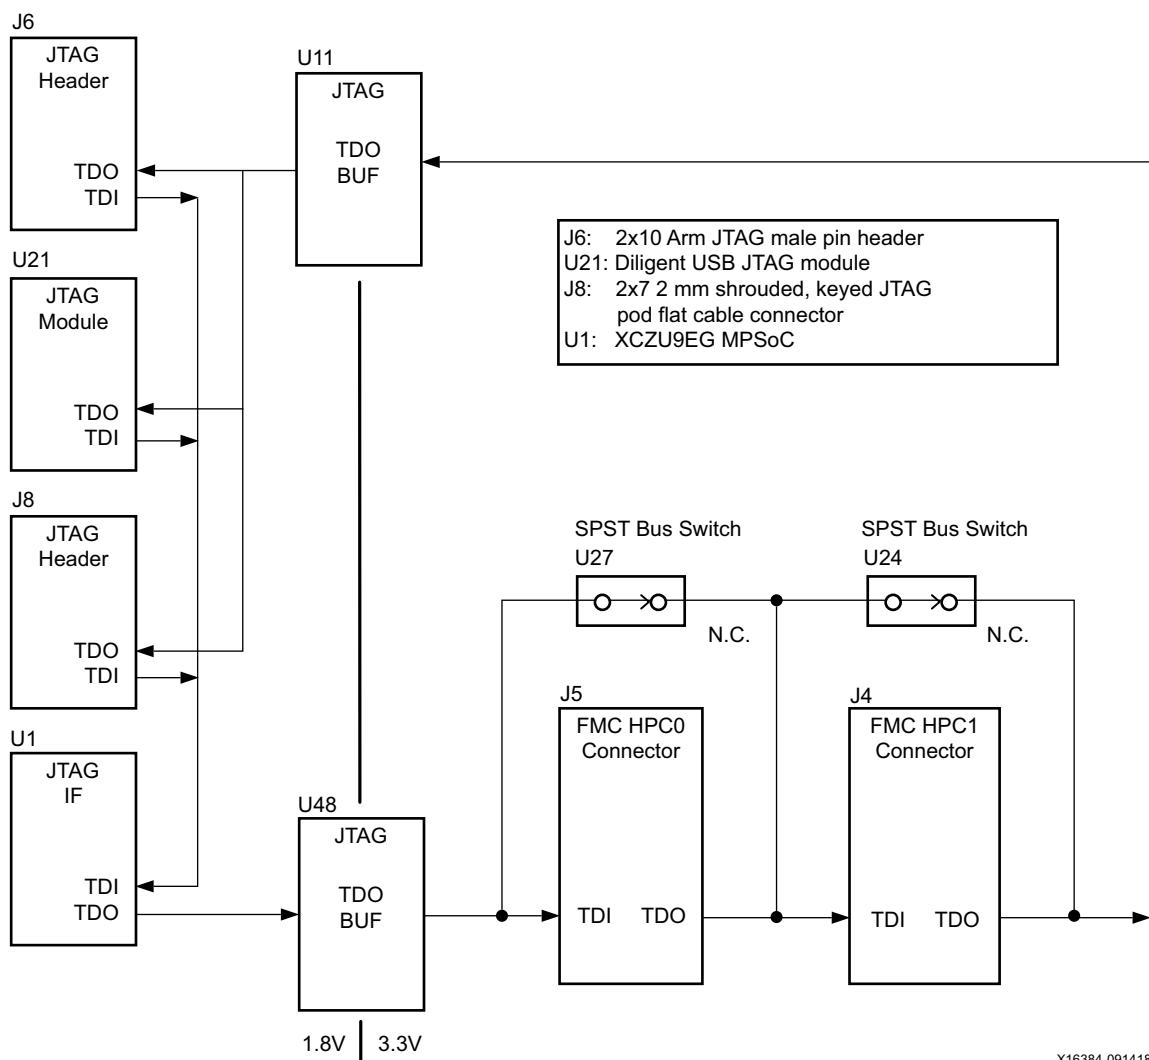

Figure 3-6: JTAG Chain Block Diagram

FMC Connector JTAG Bypass

When an FPGA mezzanine card (FMC) is attached to J5 or J4 it is automatically added to the JTAG chain through electronically controlled single-pole single-throw (SPST) switches U27 and U24. The SPST switches are normally closed and transition to an open state when an FMC is attached. Switch U27 adds an attached FMC to the JTAG chain as determined by the FMC_HPC0_PRSNT_M2C_B signal. Switch U24 adds an attached FMC to the JTAG chain as determined by the FMC_HPC1_PRSNT_M2C_B signal. The attached FMC card must implement a TDI-to-TDO connection using a device or bypass jumper to ensure that the JTAG chain connects to the XCZU9EG MPSoC.

EMIO Arm Trace Port

[Figure 2-1, callout 43]

The ZCU102 evaluation board provides a trace/debug 38-pin Mictor connector, P6. Figure 3-7 shows connector P6 with its MPSoC Bank 47/48 connections.

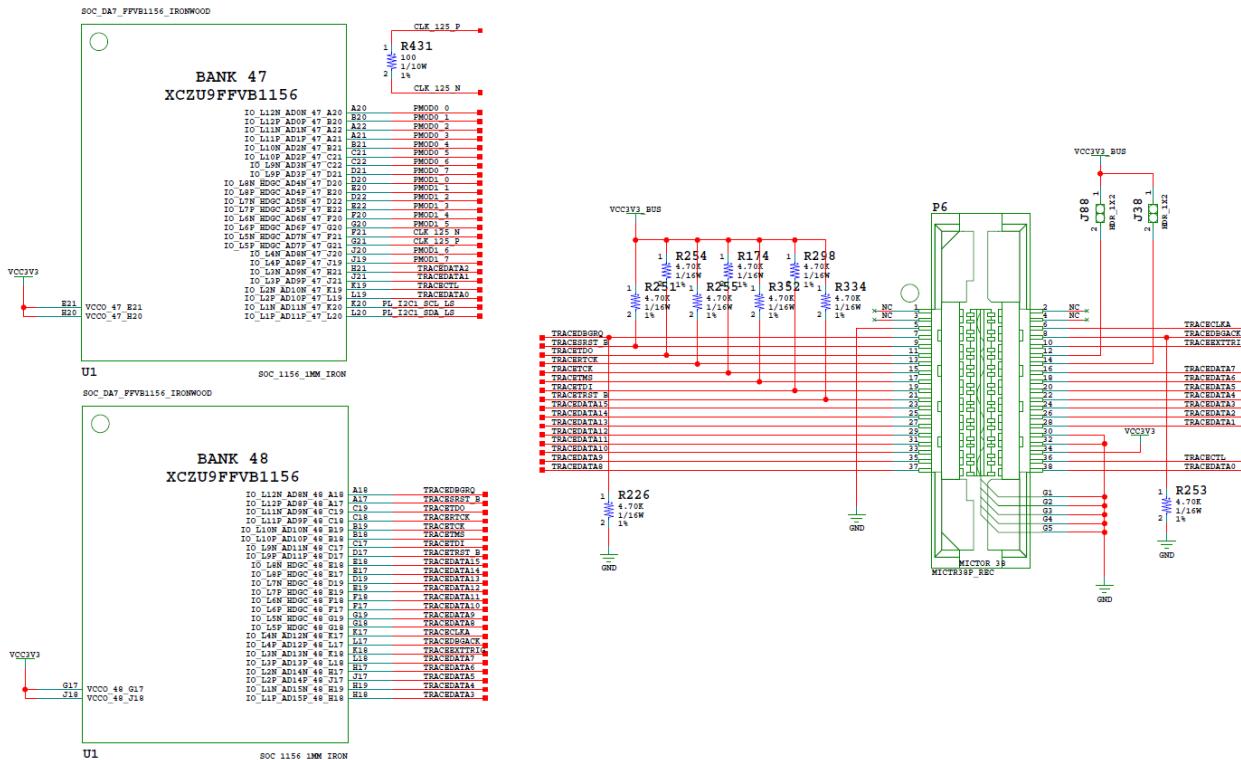

Figure 3-7: EMIO Arm Trace Port Interface

The P6 connector to MPSoC connections are listed in Table 3-11.

Table 3-11: Trace/Debug Conn. P6 Connections to the XCZU9EG MPSoC

XCZU9EG (U1) Pin	Schematic Net Name	I/O Standard	Trace/Debug P6 Pin

Notes:

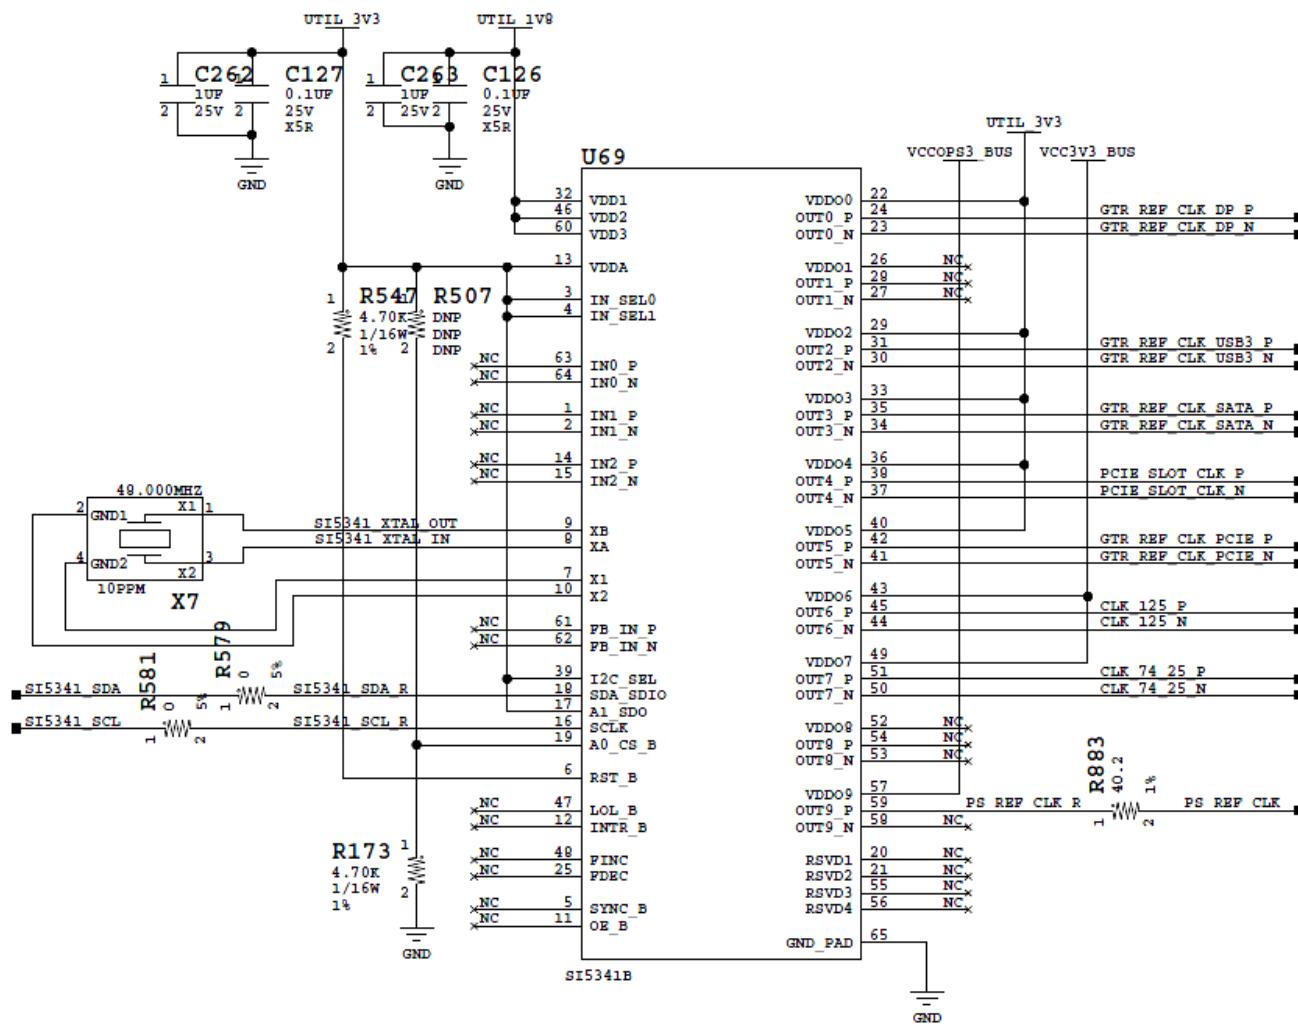

1. U1 XCU9EG Bank 503 supports LVCMOS level inputs.
2. U1 MGT (I/O standards do not apply).

SI5341B 10 Independent Output Any-Frequency Clock Generator (PS Reference Clock)

[Figure 2-1, callout 10]

- Clock generator: Silicon Labs SI5341B-B05071-GM
- Jitter: <100 fs RMS typical
- Differential and single-ended outputs

The SI5341B is a one-time programmable clock source. For more details refer to the SI5341B data sheet [Ref 19] for more details. The clock circuit is shown in Figure 3-8.

X16386-071817

Figure 3-8: SI5341B Clock Generator

Programmable User Clock

[Figure 2-1, callout 8]

The ZCU102 board has an I2C programmable SI570 low-jitter 3.3V LVDS differential oscillator (U42) connected to the GC inputs of PL bank 64. This USER_SI570_P and USER_SI570_N clock signal pair is connected to XCZU9EG MPSoC U1 pins AL8 and AL7 respectively. On power-up the user clock defaults to an output frequency of 300.000 MHz. User applications can change the output frequency within the range of 10 MHz to 810 MHz through an I2C interface. Power cycling the ZCU102 board reverts this user clock to the default frequency of 300.000 MHz.

This oscillator can be reprogrammed from MSP430 system controller U41 (see [TI MSP430 System Controller](#) for more information).

- Programmable oscillator: Silicon Labs Si570BAB001614DG (10 MHz-810 MHz)
- LVDS differential output
- Total Stability: 61.5 ppm

The user clock circuit is shown in [Figure 3-9](#). The Silicon Labs Si570 and Si53340 data sheets are available on the Silicon Labs website [\[Ref 19\]](#).

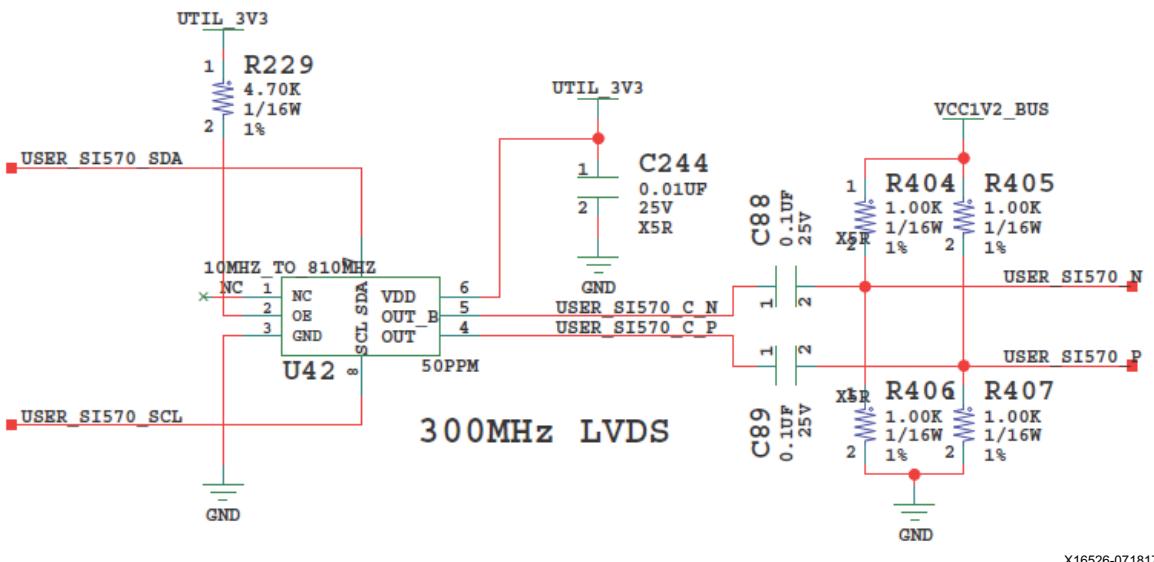

Figure 3-9: Programmable User Clock

Programmable User MGT Clock

[[Figure 2-1](#), callout 9]

The ZCU102 board has a programmable low-jitter 3.3V LVDS SI570 differential oscillator (U56) connected to a 1-to-2 SI53340 clock driver (U51). On power-up the user clock defaults to an output frequency of 156.250 MHz. User applications can change the output frequency within the range of 10 MHz to 810 MHz through an I2C interface. Power cycling the ZCU102 board reverts this user clock to the default frequency of 156.250 MHz.

This oscillator can be reprogrammed from MSP430 system controller U41 (see [TI MSP430 System Controller](#) for more information).

- Programmable oscillator: Silicon Labs Si570BAB000544DG (10 MHz-810 MHz)
- LVDS differential output
- Total stability: 61.5 ppm

The user clock MGT circuit is shown in [Figure 3-10](#). The Silicon Labs Si570 and Si53340 data sheets are available on the Silicon Labs website [\[Ref 19\]](#).

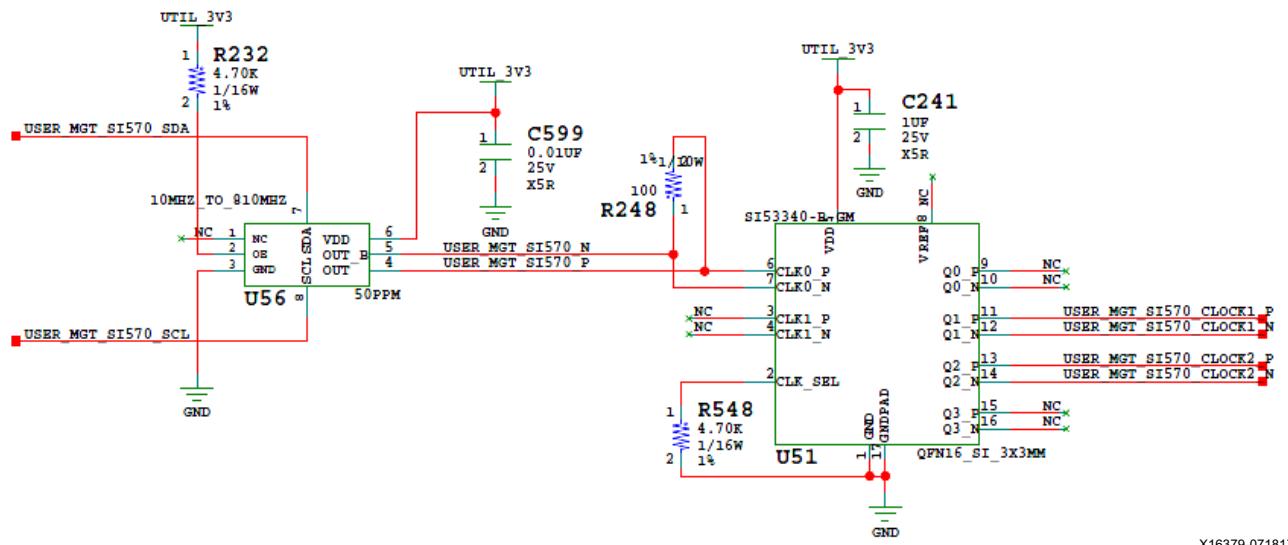

Figure 3-10: Programmable User MGT Clock

User SMA MGT Clock

[Figure 2-1, callout 42]

The ZCU102 board provides a pair of SMAs for differential AC coupled user MGT clock input into FPGA U1 MGTH bank 129. This differential signal pair is series-capacitor coupled. The P-side SMA J79 signal USER_SMA_MGT_CLOCK_P is connected to U1 MGTRCLK0P pin J27, with the N-side SMA J80 signal USER_SMA_MGT_CLOCK_N connected to U1 MGTRCLK0N pin J28. The user SMA MGT clock circuit is shown in [Figure 3-11](#).

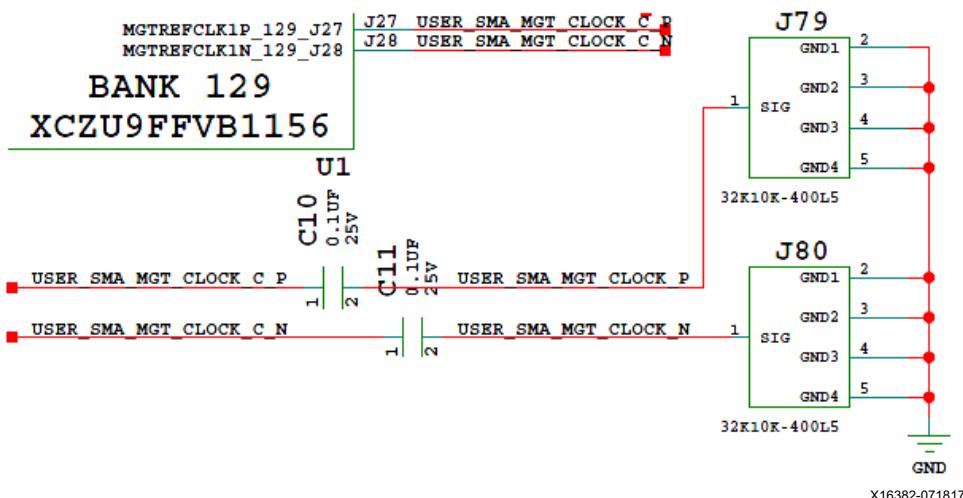

Figure 3-11: User SMA MGT Clock

GEM3 Ethernet (MIO 64-77)

[Figure 2-1, callout 12]

The PS-side Gigabit Ethernet MAC (GEM) implements a 10/100/1000 Mb/s Ethernet interface, shown in [Figure 3-12](#), which connects to a TI DP83867IRPAP Ethernet RGMII PHY before being routed to an RJ45 Ethernet connector. The RGMII Ethernet PHY is boot strapped to PHY address 5'b01100 ([0x0C](#)) and Auto Negotiation set to *Enable*. Communication with the device is covered in the DP83867 RGMII PHY data sheet [\[Ref 20\]](#).

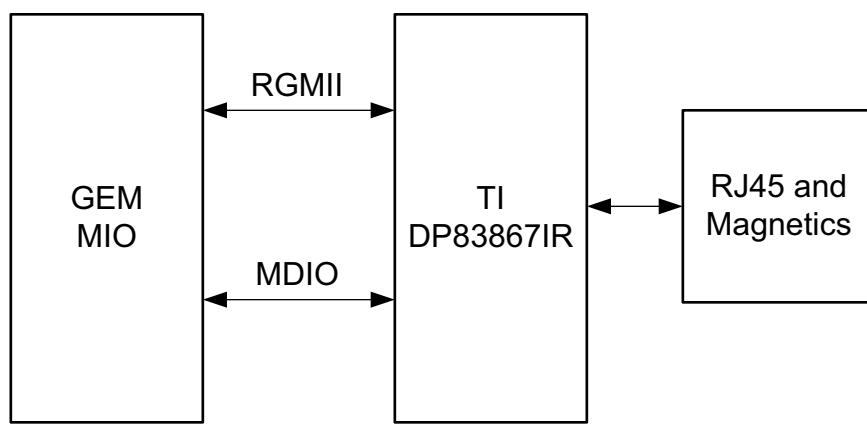

Figure 3-12: Ethernet Block Diagram

10/100/1000 MHz Tri-Speed Ethernet PHY

[Figure 2-1, callout 12]

The ZCU102 board uses the TIDP83867IRPAP Ethernet RGMII PHY [Ref 20] at U98 for Ethernet communications at 10 Mb/s, 100 Mb/s, or 1000 Mb/s. The board supports RGMII mode only. The PHY connection to a user-provided Ethernet cable is through a Wurth 7499111221A RJ-45 connector (P12) with built-in magnetics.

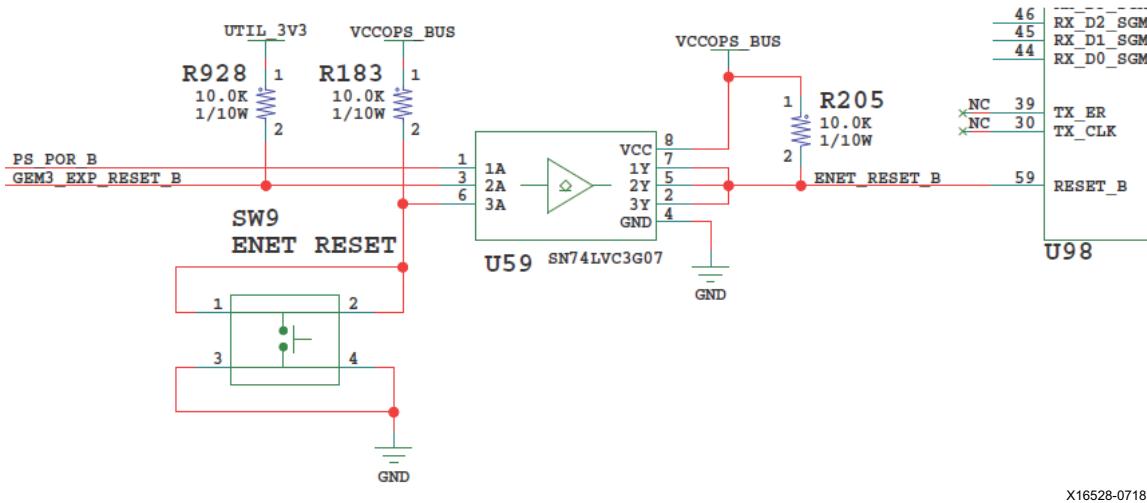

The Ethernet connections from XCZU9EG MPSoC U1 to the DP83867IRPAP PHY device at U98 are listed in [Table 3-14](#).

Table 3-14: Ethernet Connections, XCZU9EG MPSoC to the PHY Device

Ethernet PHY Reset

The DP83867IRPAP PHY U98 reset circuit is shown in [Figure 3-13](#). The DP83867IRPAP can be reset by the SW9 push-button (U59.6), the MAX16025 U22 MPSoC PS-side POR reset device (U59.1), or the I2C0 connected U97 TCA6416A I/O expander port P06 pin 10 (U59.3).

X16528-071817

Figure 3-13: Ethernet PHY Reset Circuit

Ethernet PHY LED Interface

[[Figure 2-1](#), callout 12]

The DP83867IRPAP PHY U98 LED interface (LED_0, LED_2) uses the two LEDs embedded in the P12 RJ45 connector bezel. The LED functional description is show in [Table 3-15](#).

Table 3-15: Ethernet PHY LED Functional Description

Pin		Type	Description
Name	No.		
LED_2	61	S, I/O, PD	By default, this pin indicates receive or transmit activity. Additional functionality is configurable by means of LEDCR1[11:8] register bits. Note: This pin is a strap configuration pin for RGZ devices only.
LED_1	62	S, I/O, PD	By default, this pin indicates that 100BASE-T link is established. Additional functionality is configurable by means of LEDCR1[7:4] register bits.
LED_0	63	S, I/O, PD	By default, this pin indicates that link is established. Additional functionality is configurable by means of LEDCR1[3:0] register bits.

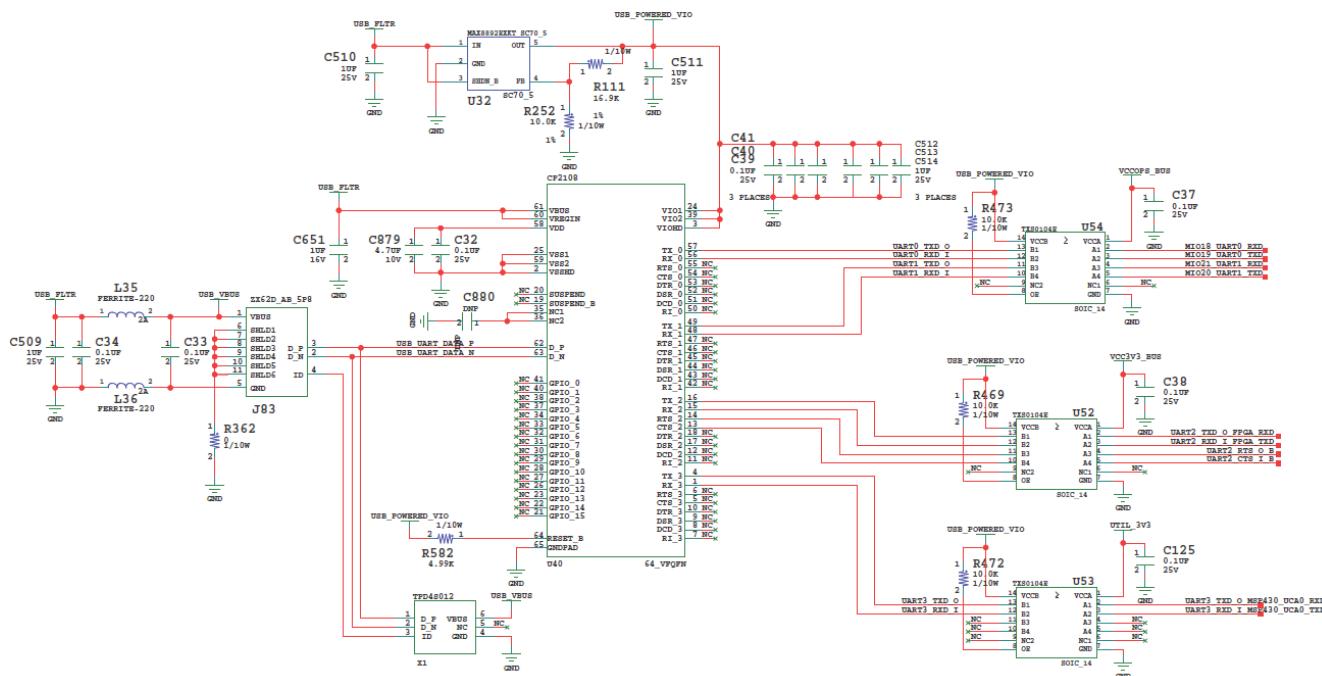

The LED functions can be re-purposed with a LEDCR1 register write available through the PHY's management Data Interface, MDIO/MDC. LED_2 is assigned to ACT (activity indicator)

and LED_0 indicates link established. For more Ethernet PHY details, see the TI DS83867 data sheet [Ref 20].

CP2108 USB UART Interface

[Figure 2-1, callout 13]

The CP2108 quad USB-UART on the ZCU102 board provides four level-shifted UART connections through single micro-B USB connector J83. Channel 0 and 1 are PS-side MIO connections described in the MIO section. Channel 2 is a PL-side connection and Channel 3 is connected to MSP430 system controller U41. The USB UART interface circuit is shown in Figure 3-14. The Silicon Labs CP2108 data sheet is available on the Silicon Labs website [Ref 19].

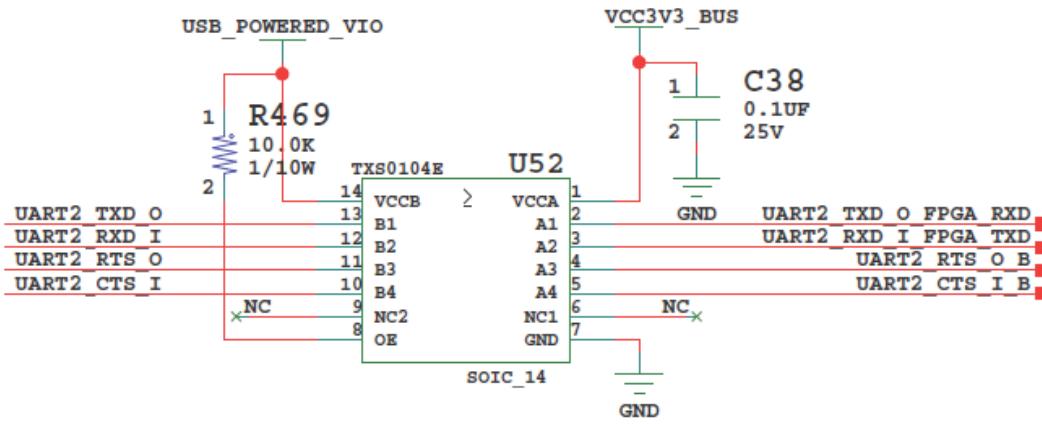

X16529-071817

Figure 3-14: USB UART Interface

CP2108 Channel 2 PL-Side UART Interface

The CP2108 channel 2 PL-side UART interface circuit is shown in Figure 3-15. The connections from XCZU9EG MPSoC U1 to CP2108 U40 via TSX0104E level shifter U52 are listed in Table 3-16.

X16530-071817

GPIO (MIO 13, 38)

These two (2) GPIO bits are connected to the U41 MSP430 system controller for general purpose signaling or communications between the Zynq UltraScale+ MPSoC and the MSP430 system controller. These signals are level-shifted by TSX0108E U141. The connections between the U41 system controller and the XCZU9EG MPSoC are listed in [Table 3-18](#).

Table 3-18: System Controller U41 GPIO Connections to XCZU9EG U1

I2C0 (MIO 14-15)

I2C0 connects to MPSoC U1 PS Bank 500 and PL bank 50, and to system controller U41, as shown in [Figure 3-17](#). I2C0 connects to two GPIO 16-bit port expanders (TCA6416A U61 and U97) and an I2C SWITCH (PCA9544A U60) for controlling resets, GTR multiplexer settings, and power system enable pins, without requiring the PL-side to be configured. TCA6416A U97 is pin-strapped to respond to I2C address **0x20**, and U61 to **0x21**. The PCA9544A multiplexer is set to **0x75**.

The I2C0 bus also provides access to the PMBUS power controllers and PS-side and PL-side INA226 power monitors via the U60 PCA9544A bus switch. All PMBus controlled Maxim regulators are tied to the MAXIM_PMBUS, while the INA226 power monitors are separated on to PS_PMBUS and PL_PMBUS. [Figure 3-17](#) shows the I2C0 bus topology.

[Table 3-19](#) lists the I2C0 port expander TCA6416A U61 connections and [Table 3-20](#) the TCA6416A U97 connections. The devices on each bus of the I2C0 multiplexer U60 are identified in [Table 3-21](#) and the multiplexer bus connections are listed in [Table 3-22](#).

UART0 (MIO 18-19)

This is the primary Zynq UltraScale+ MPSoC PS-side UART interface and is connected to the U40 CP2108 USB-to-Quad-UART bridge with port assignments as listed in [Table 3-25](#). PS-side UART0 is accessed through the U40 CP2108 USB-to-Quad-UART bridge port 0.

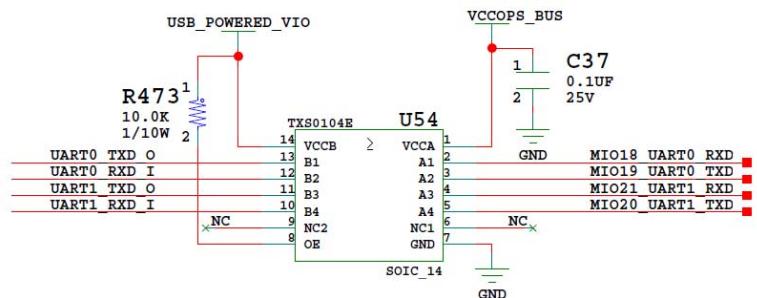

IMPORTANT: Use SiLabs CP210X VCP driver version 6.7.0 or later for proper USB enumeration as identified in [Table 3-25](#).

Table 3-25: CP2108 UART Assignments

GPIO (MIO 22-23)

PS-side pushbutton SW19 is connected to MIO22 (pin U1.AD20). PS-side LED DS50, placed next to the pushbutton, is connected to MIO23 (pin U1.AD19).

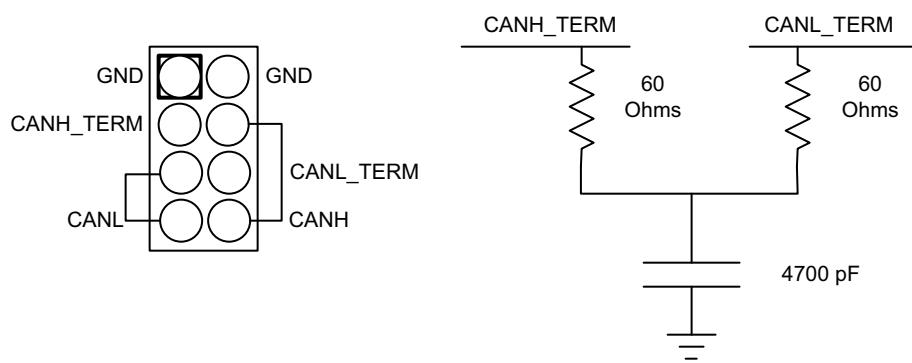

CAN1 (MIO 24-25)

The PS-side CAN bus TX and RX MIO pins go through TXS0104E level-translator U33 and TI SN65HVD232 CAN-bus transceiver U122 before being presented to the user on 0.1 inch centered 8-pin male header J98 (see [Figure 3-20](#) and [Figure 3-21](#)).

X16533-071817

Figure 3-20: PS-Side CAN Bus Interface Diagram

X16534-071817

Figure 3-21: PS-Side Can Bus Interface Connector

PMU GPI (MIO 26)

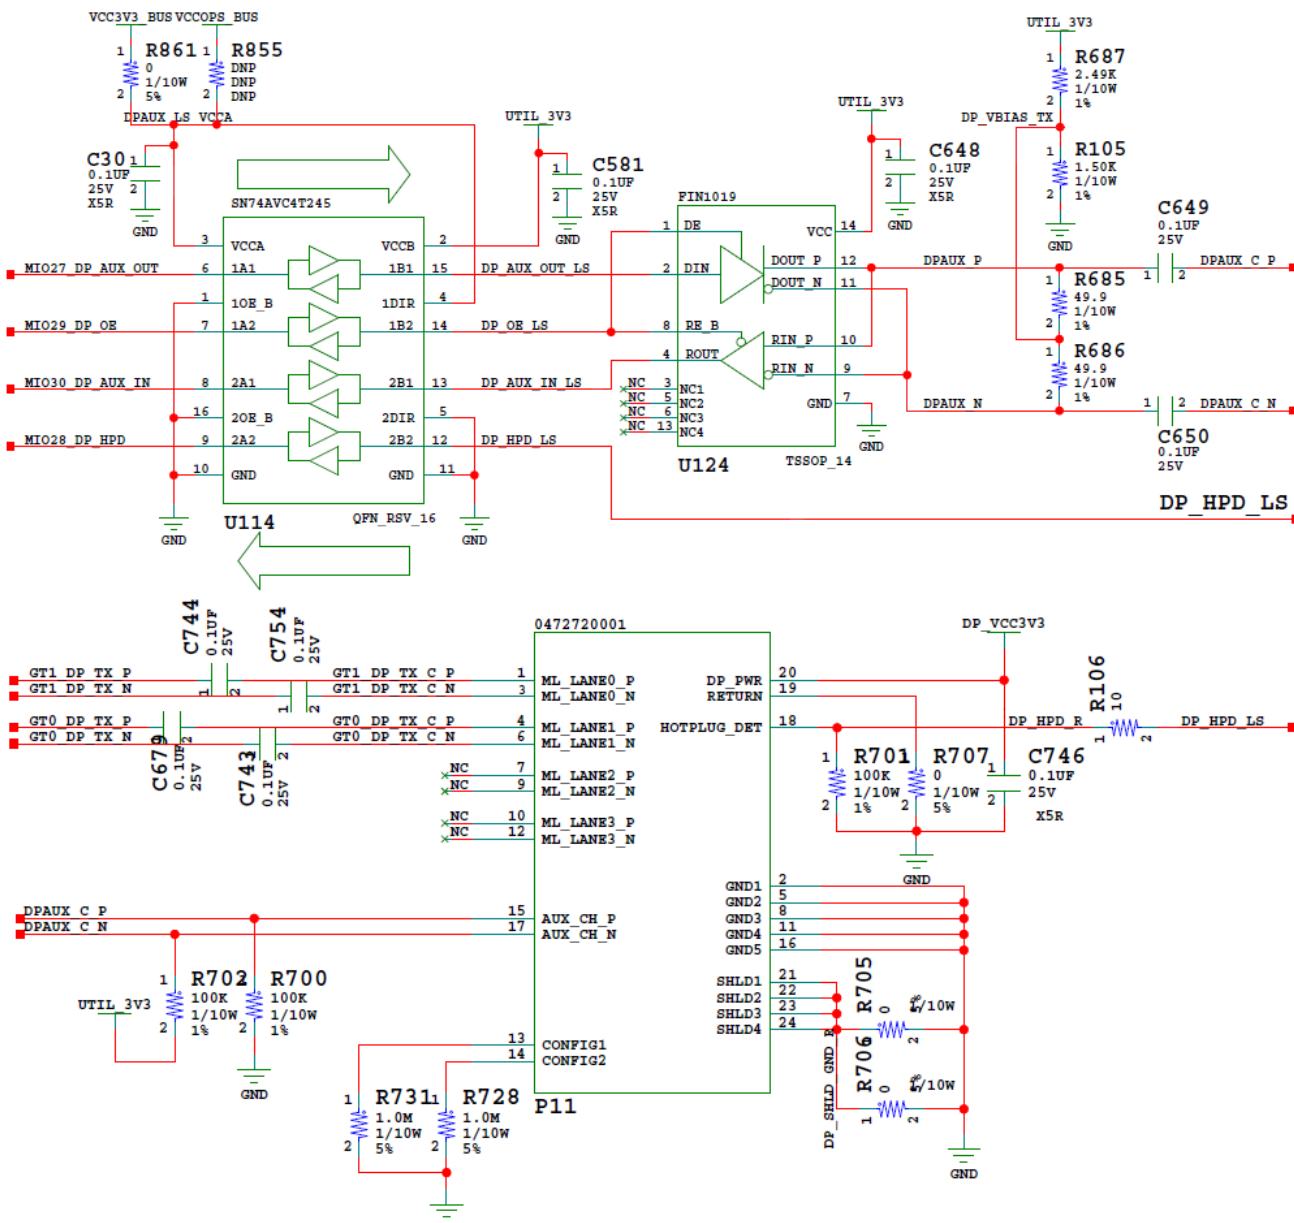

PS-side MIO 26 is reserved as an input to the PMU for indicating a warm boot. PS bank 501 MIO26 (U1.P21) is connected to the I2C0 U61 TCA6416APWR bus expander (port P04 U61.8) through L/S U147 SN74AVC1T45. Refer the *Zynq UltraScale+ MPSoC Technical Reference Manual* (UG1085) [[Ref 3](#)] for more details about the PMU interface.

DPAUX (MIO 27-30)

The Zynq UltraScale+ MPSoC provides a VESA DisplayPort 1.2 source-only controller that supports up to two lanes of main link data at rates of 1.62 Gb/s, 2.70 Gb/s, or 5.40 Gb/s. The DisplayPort standard defines an auxiliary channel that uses LVDS signaling at a 1 Mb/s data rate, which is translated from single-ended MIO signals to the differential DisplayPort AUX channel, DPAUX (see [Table 3-27](#)). The DisplayPort circuit is shown in [Figure 3-22](#).

X16547-122118

Figure 3-22: DisplayPort Circuit

PCIe Reset (MIO 31)

The Zynq UltraScale+ MPSoC contains an integrated block for PCI Express interface based on the PCIe base v2.1 specification. The PS-side PCIe reset signal is wired to the PCIe Gen2 x4 root port slot P1. The MIO31 pin is an output for PCIe Root Port mode operation on the ZCU102.

PMU GPO (MIO 32-37)

The platform management unit (PMU) within the Zynq UltraScale+ MPSoC signals power domain changes using the PMU output pins for deep-sleep mode. The Zynq UltraScale+ MPSoC PMU GPO pins are connected to inputs of the MSP430 system controller via TXS0108E level-shifter U141. The connections from MPSoC U1 Bank 501 to MSP430 U41 are listed in [Table 3-28](#).

Table 3-28: XCZU9EG U1 to MSP430 Connections

XCZU9EG (U1) Pin	Schematic Net Name	MSP430 U41	
		Pin Name	Pin No.
N22	MIO37_PMU_GPO5	P1_0	13

H23	MIO33_PMU_GPO1	P1_4	17
H22	MIO32_PMU_GPO0	P1_5	18

Through the I²C0 Bus MPSoC MIO pins, the PMU has access to the board power controllers and power monitors. See [Figure 3-17, page 57](#) for more details.

Refer the *Zynq UltraScale+ MPSoC Technical Reference Manual* (UG1085) [Ref 3] for more details about the PMU interface.

HDMI Video Output

[[Figure 2-1](#), callout 14]

The ZCU102 board provides a high-definition multimedia interface (HDMI®) video output using a TI SN65DP159RGZ HDMI re-timer at U94. The HDMI output is provided on a TE Connectivity 1888811-1 right-angle dual-stacked HDMI type-A receptacle at P7. The SN65DP159RGZ device is a dual mode DisplayPort to transition-minimized differential signal (TMDS) re-timer supporting digital video interface (DVI) 1.0 and high-definition multimedia interface (HDMI) 1.4b and 2.0 output signals. The SN65DP159RGZ device supports the dual mode standard version 1.1 type 1 and type 2 through the DDC link or AUX channel. The SN65DP159RGZ device supports data rates up to 6 Gb/s per data lane to support Ultra HD (4K x 2K / 60 Hz) 8-bits per color high-resolution video and HDTV with 16-bit color depth at 1080p (1920 x 1080 / 60 Hz). The SN65DP159RGZ device can automatically configure itself as a re-driver at data rates <1 Gb/s, or as a re-timer at more than this data rate. This feature can be turned off through I²C programming.

The HDMI video output block diagram is shown in [Figure 3-23](#), the interface circuit in [Figure 3-24](#). The connections between the codec and the XCZU9EG MPSoC are listed in [Table 3-29](#).

HDMI Clock Recovery

[Figure 2-1, callout 40]

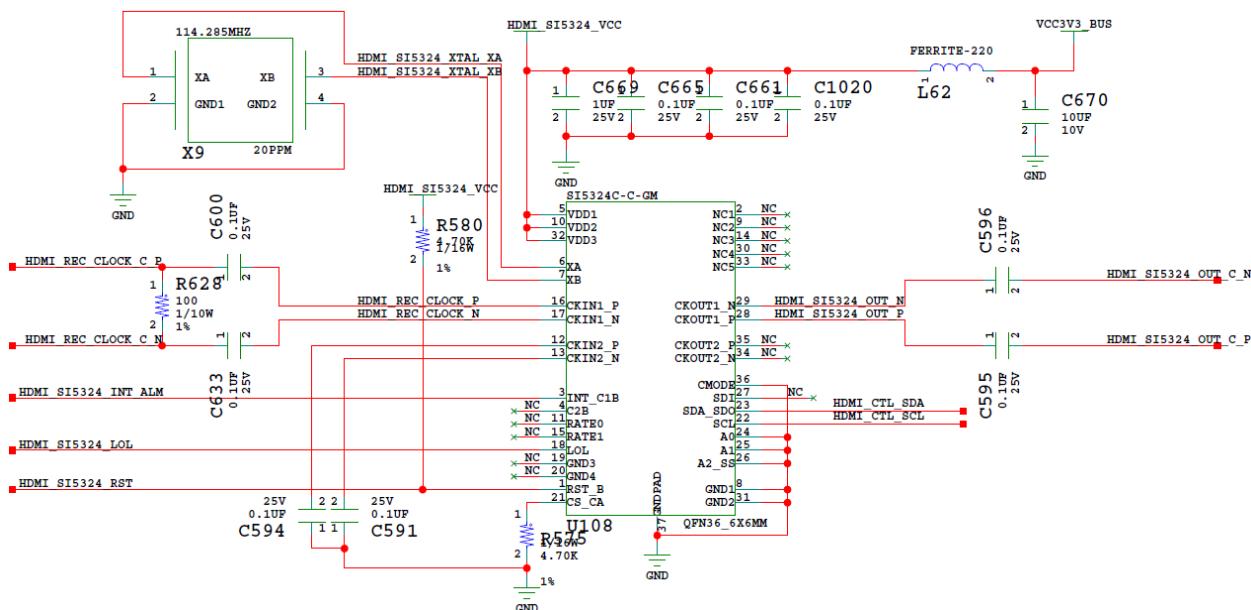

The ZCU102 board includes a Silicon Labs Si5324C jitter attenuator U70 (2 kHz - 945 MHz). The FPGA can output the RX recovered clock to a differential I/O pair on I/O bank 66 (HDMI_REC_CLOCK_C_P, pin Y8 and HDMI_REC_CLOCK_C_N, pin Y7) for jitter attenuation.

The jitter attenuated clock (HDMI_SI5324_OUT_C_P (U108 pin 28), HDMI_SI5324_OUT_C_N (U108 pin 29) is then routed as a reference clock to GTH Quad 128 inputs MGTRCLK0P (U1 pin R27) and MGTRCLK0N (U1 pin R28).

The Si5324 jitter attenuator is used to generate the reference clock for the HDMI Transmitter Subsystem. When the HDMI transmitter is used standalone, the Si5324 operates in free running mode and uses an external oscillator as the reference. When the HDMI is in pass-through mode, the Si5324 generates a jitter-attenuated reference clock to drive the HDMI Transmitter Subsystem with a phase-aligned version of the HDMI RX Subsystem TMDS clock, so that they are phase aligned. SI5324 clock and jitter enable functions are controlled by HDMI IP. Communication with the Si5324 is available over the HDMI_CTL_SDA/SCL bus connected to the XCZU9 MPSoC U1 PL bank 49. The jitter attenuated clock circuit is shown in [Figure 3-25](#).

IMPORTANT: The Silicon Labs Si5324C U108 pin 1 reset net HDMI_SI5324_RST must be driven High to enable the device. U108 pin 1 net HDMI_SI5324_RST is connected to FPGA U1 bank 50 pin J12.

[Figure 3-25: HDMI Interface Clock Recovery](#)

SFP/SFP+ Connector

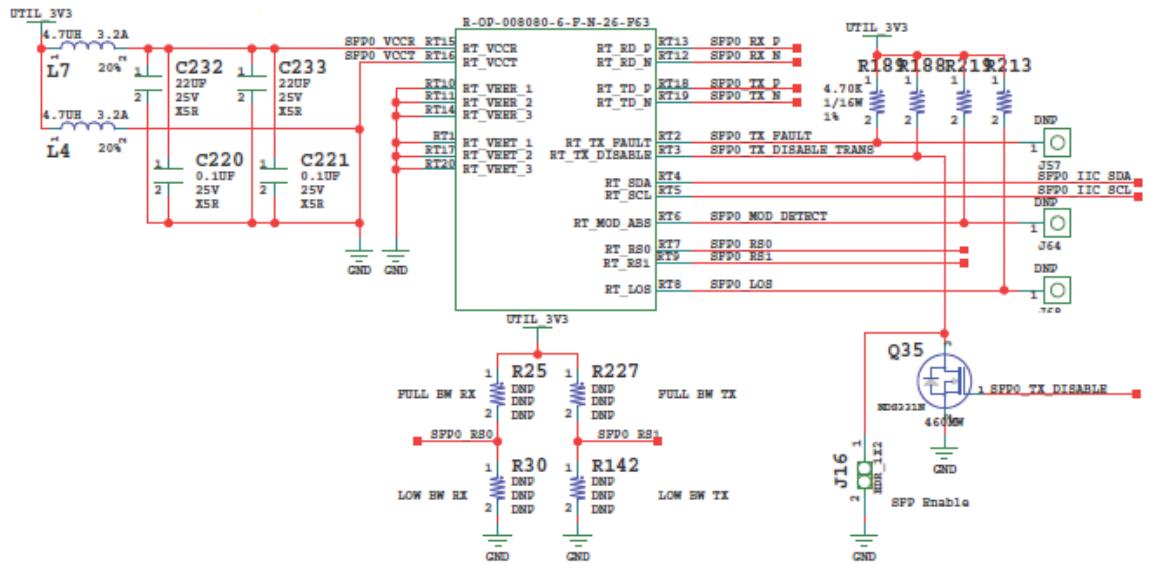

[[Figure 2-1](#), callout 17]

The ZCU102 board contains a small form-factor pluggable (SFP+) 2x2 quad-connector and cage assembly that accepts SFP or SFP+ modules. [Figure 3-26](#) shows a typical SFP+ module connector circuitry implementation. [Table 3-30](#) lists the connections between the connectors and the XCZU9EG MPSoC.

Note: The SFP module RT_TX_DISABLE pin 3:

- RT_TX_DISABLE module pin 3 SFP Enable 2-pin jumper OFF = logic High = SFP TX disabled, allows FPGA control.

- RT_TX_DISABLE module pin 3 SFP Enable 2-pin jumper ON = logic Low = SFP TX enabled, overrides FPGA control.
- Also, note that the SFPx_TX_DISABLE_TRANS default 2-pin jumper strapping is Open which means the SFPx_TX_DISABLE_TRANS net/SFP module pin 3 is pulled High. Hence, disabling the TX output of SFP module by default.
- The default open TX Enable jumpers allow user-FPGA IP to control activation of each modules' SFPx_TX_DISABLE_TRANS pin independently.
- User-FPGA logic can drive the TX control transistor base (net SFPx_TX_DISABLE) logic Low to disable the SFP module TX, or drive it High to enable the SFP module TX (because the TX control transistor is an inverter).

Notes:

1. SFPx_TX_DISABLE pins should implement the LVCMS33 I/O standard.

SFP/SFP+ Clock Recovery

[Figure 2-1, callout 11]

The ZCU102 board includes a Silicon Labs Si5328B jitter attenuator U20 (8 kHz - 808 MHz). The FPGA can output the RX recovered clock to a differential I/O pair on I/O bank 67 (SFP_REC_CLOCK_C_P, pin R10 and SFP_REC_CLOCK_C_N, pin R9) for jitter attenuation.

The jitter attenuated clock (SFP_SI5328_OUT_C_P (U20 pin 28), SFP_SI5328_OUT_C_N (U20 pin 29)) is then routed as a reference clock to GTH Quad 230 inputs MGTRCLK1P (U1 pin B10) and MGTRCLK1N (U1 pin B9).

The primary purpose of this clock is to support synchronous protocols such as CPRI or OBSAI to perform clock recovery from a user-supplied SFP/SFP+ module and use the jitter attenuated recovered clock to drive the reference clock inputs of a GTH transceiver. The system controller configures the SI5328B in free-run mode (see [TI MSP430 System Controller](#)). Enabling the jitter attenuation feature requires additional user programming from the FPGA through the I2C bus. The jitter attenuated clock circuit is shown in [Figure 3-28](#).

User I2C0 Receptacle

[Figure 2-1, callout 20]

The ZCU102 evaluation board supports a PMOD 2X6 receptacle (right-angle female) J160. Figure 3-30 shows the I2C0 PMOD receptacle J160. The I2C0 nets are a branch of the I2C0 main bus (see Figure 3-17 and I2C0 (MIO 14-15) for more details).

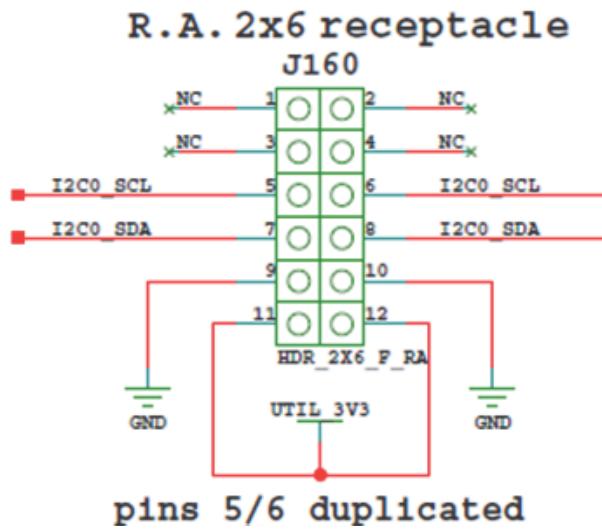

Figure 3-30: J160 PMOD I2C0 R.A. Receptacle

User I/O

[Figure 2-1, callouts 21-23]

The ZCU102 board provides these user and general purpose I/O capabilities:

- Eight user LEDs (callout 21)
 - GPIO_LED[7:0]: DS38, DS37, DS39, DS40, DS41, DS42, DS43, DS44
- 8-position user DIP Switch (callout 22)
 - GPIO_DIP_SW[7:0]: SW13
- Five user pushbuttons and CPU reset switch (callout 23)
 - GPIO_SW_[NESWC]: SW18, SW17, SW16, SW14, SW15
 - CPU_RESET: SW20

Figures [Figure 3-31](#) through [Figure 3-33](#) show the GPIO circuits, and [Table 3-33](#) lists the GPIO to XCZU9EG U1 connections.

Notes:

- See the *Zynq UltraScale+ MPSoC Technical Reference Manual* (UG1085) [Ref 3] for more information about Zynq UltraScale+ MPSoC configuration pins.

Figure 3-34 shows the power and status LEDs.

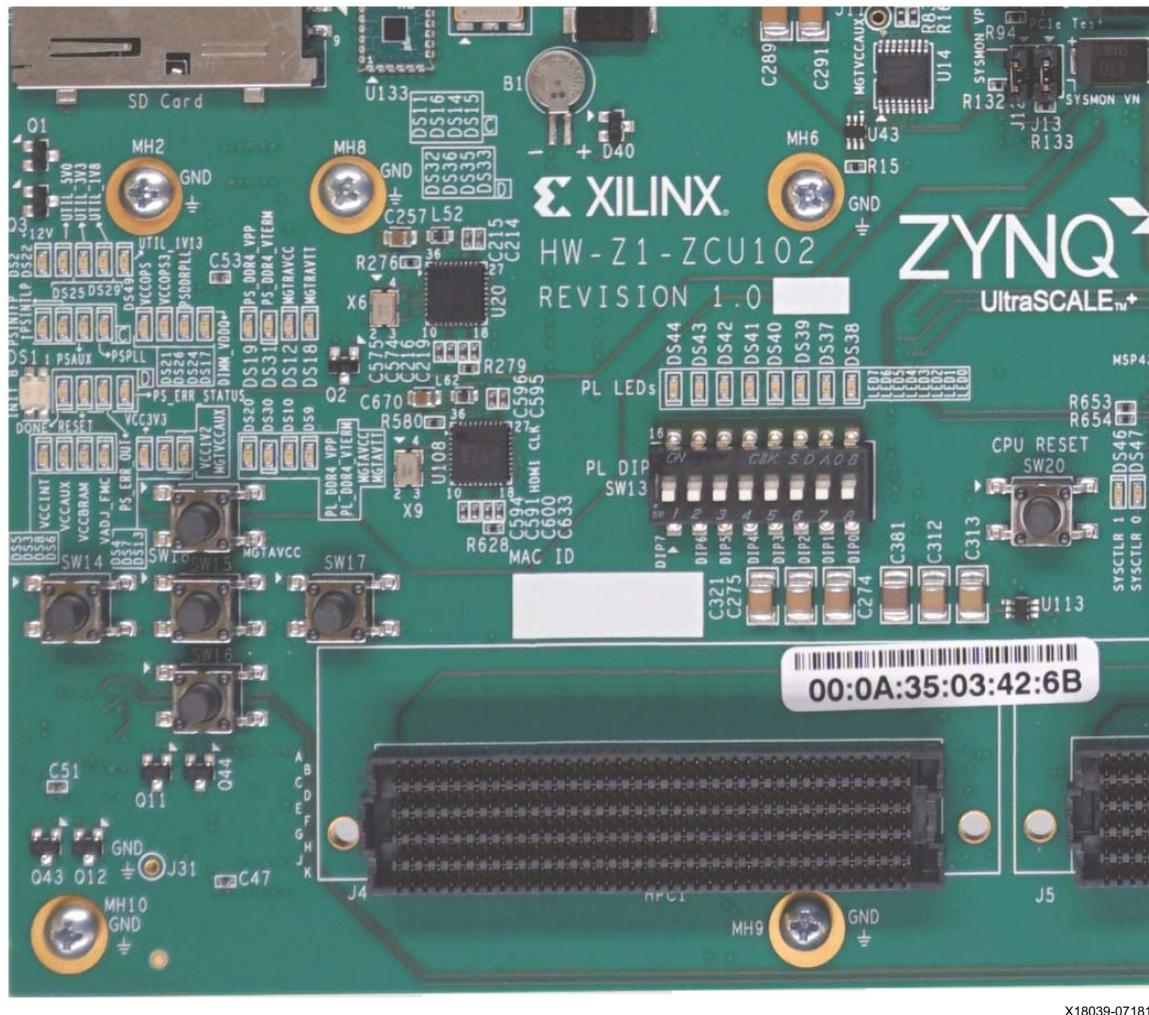

Figure 3-34: Power and Status LEDs

GTH Transceivers

[Figure 2-1, callout 1]

The Zynq UltraScale+ MPSoC has 24 GTH gigabit transceivers (16.3 Gb/s capable) on the PL-side.

The GTH transceivers in the XCZU9EG device are grouped into four channels referred to as Quads. The reference clock for a Quad can be sourced from the Quad above or Quad below the GTH Quad of interest. There are six GTH Quads on the ZCU102 board with connectivity as shown here:

- Two of the GTH transceivers are wired to the FMC0 HPC connector (J5)
- Two of the GTH transceivers are wired to the FMC1 HPC connector (J4)

- One of the GTH transceivers is wired to SFP/SFP+ Quad-Module connector (P2)
- One GTH transceiver is wired to the HDMI re-timer U94 and a set of GTH SMAs

Quad 128:

- MGTREFCLK0 - HDMI_SI5324_OUT_C_P/N
- MGTREFCLK1 - HDMI_RX_CLK_C_P/N
- Contains 3 GTH transceivers allocated to HDMI_TX/RX[0:2]_P/N
- Contains 1 GTH transceiver allocated to a set of SMA connectors (SMA_MGT_TX and RX P/N)

Quad 129:

- MGTREFCLK0 - USER_MGT_SI570_CLOCK1_C_P/N
- MGTREFCLK1 - USER_SMA_MGT_CLOCK_C_P/N
- Contains 4 GTH transceivers allocated to FMC_HPC1_DP[4:7]_C2M/M2C_P/N

Quad 130:

- MGTREFCLK0 - FMC_HPC1_GBTCLK0_M2C_P/N
- MGTREFCLK1 - FMC_HPC1_GBTCLK1_M2C_P/N
- Contains 4 GTH transceivers allocated to FMC_HPC1_DP[0:3]_C2M/M2C_P/N

Quad 228:

- MGTREFCLK0 - FMC_HPC0_GBTCLK1_M2C_P/N
- MGTREFCLK1 - Not connected
- Contains 4 GTH transceivers allocated to FMC_HPC0_DP[4:7]_C2M/M2C_P/N

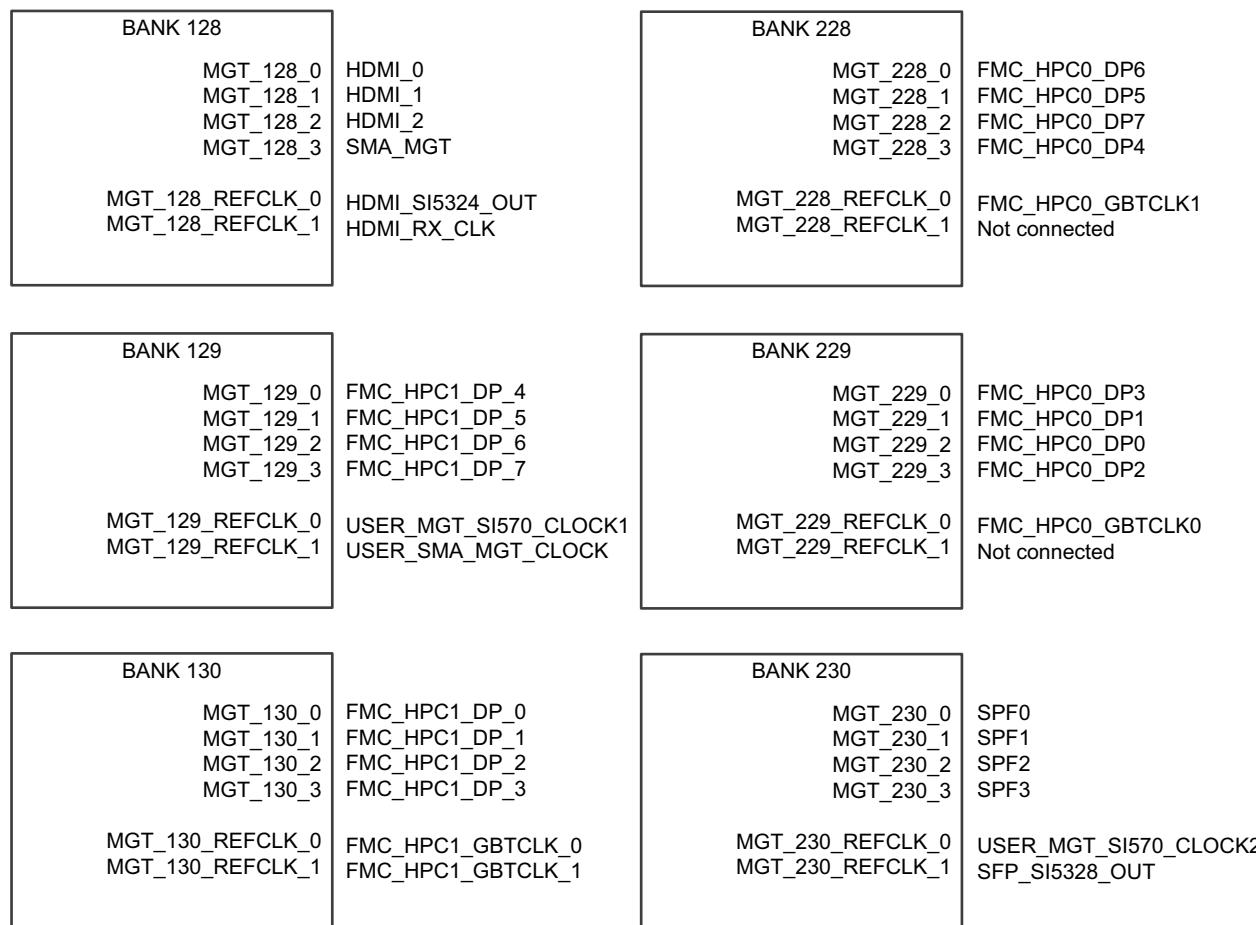

Quad 229:

- MGTREFCLK0 - FMC_HPC0_GBTCLK0_M2C_P/N
- MGTREFCLK1 - Not connected
- Contains 4 GTH transceivers allocated to FMC_HPC0_DP[0:3]_C2M/M2C_P/N

Quad 230:

- MGTREFCLK0 - USER_MGT_SI570_CLOCK2_C_P/N
- MGTREFCLK1 - SFP_SI5328_OUT_C_P/N
- Contains 4 GTH transceivers allocated to SFP[0:3]_TX/RX_P/N

GTH usage on the ZCU102 is shown in [Figure 3-35](#).

X16543-071917

Figure 3-35: GTH Bank Assignments

FMC HPC_0

Eight (8) MGTs in a common FPGA column are provided by PL-side MGT banks 228 and 229. Available MGT reference clocks include the FMC defined GBT clocks 0 and 1 for HPC_0, a programmable Si570 clock, and a jitter attenuated recovered clock from a Si5328. The MGT reference clocks are located in adjacent MGT banks, 228, 229, and 230.

FMC HPC_1

Eight (8) MGTs in a common FPGA column are provided by PL-side MGT banks 129 and 130. Available MGT reference clocks include the FMC defined GBT clocks 0 and 1 for HPC_1, a programmable Si570 clock, and a user provided SMA clock. The MGT reference clocks are located in adjacent MGT banks, 128, 129, and 130.

SFP+

Four (4) PL-side GTH transceivers in Bank 230 are provided for the quad SFP+ interface. Available GTH reference clocks include a programmable Si570 clock, and a jitter attenuated recovered clock from a Si5328.

SFP+ modules typically provide an I2C based control interface. This I2C interface is accessible for each individual SFP+ module through the I2C multiplexer topology on the ZCU102.

HDMI

Three (3) PL-side GTH transceivers are dedicated for HDMI source and sink. Modes supported are 4K, 2K at 60 f/s and 2160p60. External circuitry for interfacing TMDS signals with the GTH transceivers is required.

SMA

One (1) MGT in Bank 128 is provided on a SMA connector pair. Available MGT clocks include a user provided MGT reference clock on an SMA connector pair, and a programmable Si570 clock. [Table 3-35](#) lists GTH bank 128 connections.

Table 3-35: ZCU102 GTH Bank 128 Interface Connections

3. U51 buffer driven by SI570 U56 (156.250 MHz default).

For additional information on GTH transceivers, see the *UltraScale Architecture GTH Transceivers User Guide* (UG576) [Ref 6]. For additional information about UltraScale FPGA PCIe functionality, see the *UltraScale Architecture Gen3 Integrated Block for PCI Express LogiCORE IP Product Guide* (PG156) [Ref 7]. Additional information about the PCI Express standard is available at the PCI Express website [Ref 21].

PS-Side: GTR Transceivers

[Figure 2-1, callout 1]

The PS-side GTR transceivers are shared through on-board bidirectional 2:1 multiplexer/de-multiplexer switches U125-U128 (Pericom PI2DBS6212 [Ref 22]) capable of 6.5 Gb/s operation (see Figure 3-36).

X16616-071817

Figure 3-36: Pericom GTR Switch Block Diagram

The external GT-switch selection must be set by the user to ensure consistency with the ZU9EG's internal GT interconnect matrix (ICM) settings. There are PS-side MIO GPIO(s) that control the Pericom GT switch settings via PS-side I2C0 and the external GPIO port expander.

The functionality of each ZU9EG GTR lane is controlled through the MPSoC's ICM and is defined in the *Zynq UltraScale+ MPSoC Technical Reference Manual* (UG1085) [Ref 3].

Table 3-41 lists the interconnect matrix (ICM). Table 3-42 lists the interconnect matrix settings and GTR lane functionality.

Table 3-41: XCZU9EG Interconnect Matrix

Protocol	PHY Lane 0	PHY Lane 1	PHY Lane 2	PHY Lane 3
PCIe	PCIe.0	PCIe.0	PCIe.0	PCIe.0
SATA	SATA.0	SATA.1	SATA.0	SATA.1
USB0	USB0	USB0	USB0	
USB1				USB1
DisplayPort	DP.1	DP.0	DP.1	DP.0
SGMII0	SGMII0			
SGMII1		SGMII1		
SGMII2			SGMII2	
SGMII3				SGMII3

Table 3-42: Interconnect Matrix Settings and GTR Lane Functionality

Protocol	Values
Power down	3`h0
PCIe	3`h1
SATA	3`h2
USB	3`h3
DisplayPort	3`h4
SGMII	3`h5

The GTR selections provided with GT switch topology shown in [Figure 3-37](#) are:

1. PCIe Gen2/1 x4
2. DisplayPort (2-Lanes), USB, SATA
3. PCIe Gen2/1 x2, USB, SATA
4. PCIe Gen2/1 x1, DisplayPort (1-Lane), USB, SATA

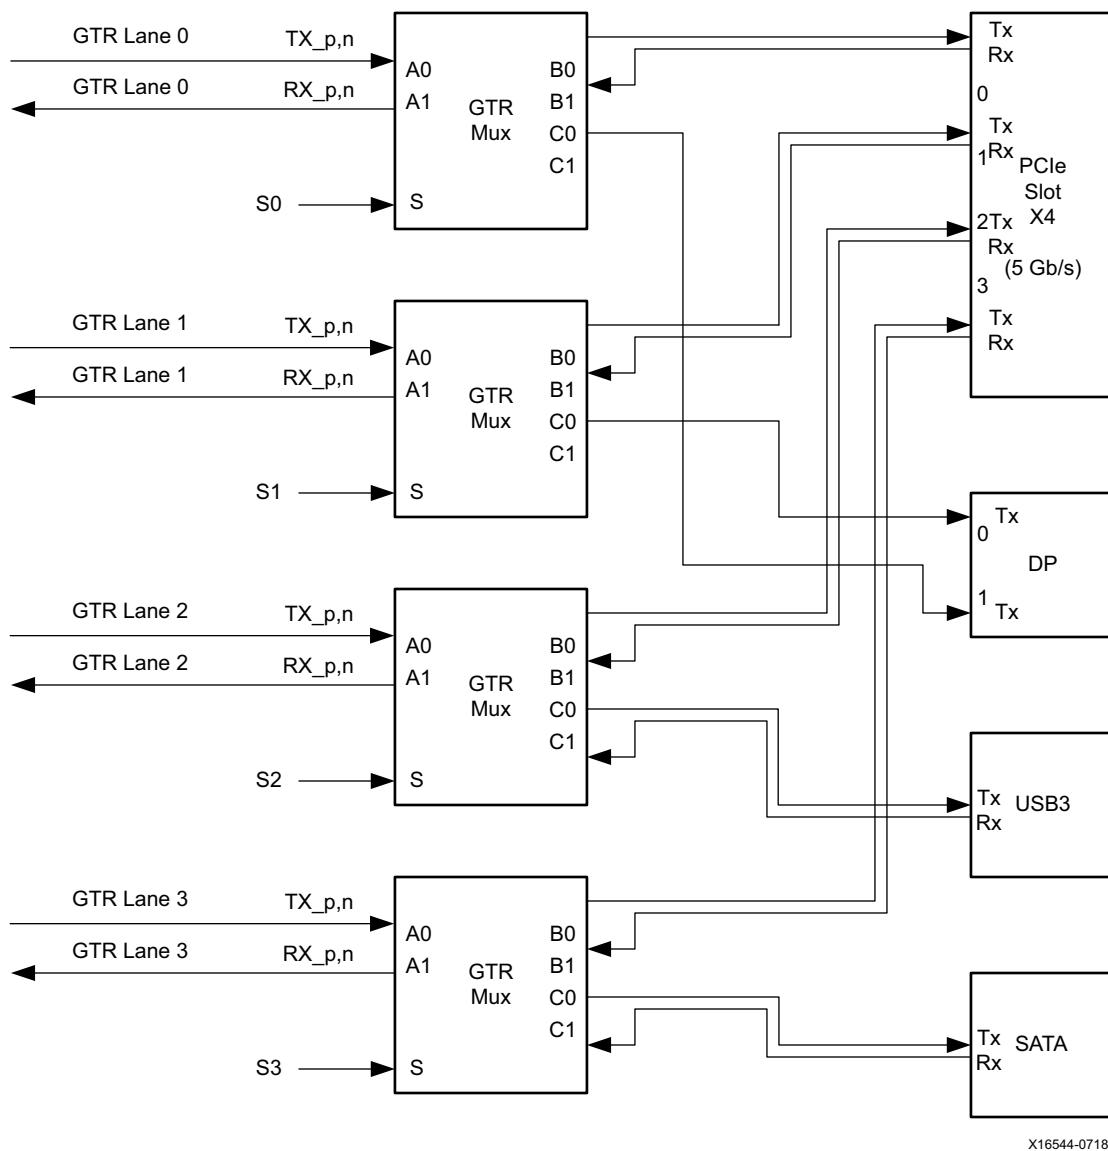

Figure 3-37: GTR External Switch Connectivity

The ICM settings for lane functionality must be set consistent with the external U125 Pericom PI2DBS6212 GTR multiplexer settings to provide appropriate functionality on the connectors wired to the PS-side GTR transceivers. The external GTR multiplexer selection is controlled by the PS-side I2C0 GPIO port expander (U97) connected to the multiplexer's "S" input. S = 0 connects the A input to the B output, whereas S = 1, connects the A input to the C output. The "S" select logic is implemented with GPIO pins to support the settings listed in Table 3-43.

Table 3-43: Supported GTR Connector Functionality

SEL (S3,2,1,0)	ICM Settings (Lane 0,1,2, 3)	PCIe Connector	DP Connector	USB Connector	SATA Connector
0000	PCIe.0, PCIe.1, PCIe.2, PCIe.3	PCIe Gen2 x4	N.C.	N.C.	N.C.
1111	DP.1, DP.0, USB, SATA	N.C.	DP.0, DP.1	USB0	SATA1
1100	PCIe.0, PCIe.1, USB, SATA	PCIe Gen2 x2	N.C.	USB0	SATA1
1110	PCIe.0, DP.0, USB, SATA	PCIe Gen2 x1	DP.0	USB0	SATA1

PCIe (MIO 31)

The ZCU102 hosts a 4-lane PCIe root port connector similar to those commonly used on many micro-ATX motherboards. The PS-side GTR transceivers can be set to provide a PCI Express interface that operates at GEN2 speeds with a width of 1-lane (x1), 2-lanes (x2), or 4-lanes (x4).

The Zynq UltraScale+ MPSoC contains an integrated block for PCI Express interface based on the PCIe base v2.1 specification. The PS-side, PCIe reset signal (PS Bank 501 MIO31 pin J22) is wired to the PCIe Gen2 x4 root port slot P1. This MIO pin is an output for Root Port mode operation. The primary purpose of the ZCU102 is for PCIe root port operation.

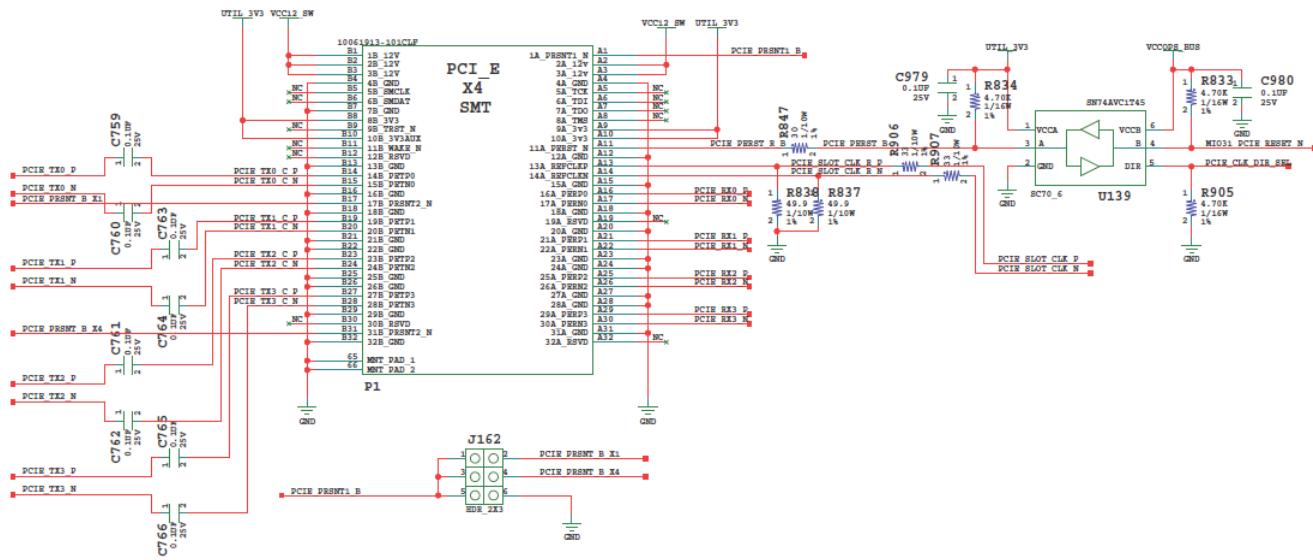

PCI Express Root Port Slot

[Figure 2-1, callout 35]

Production ZCU102s implement an x8 PCIe connector P1 supporting x4 PCIe. This allows for flexibility so the ZCU102 can accommodate PCIe boards that are designed for up to x8 without requiring an x8-to-x4 PCIe lane reducer.

The PCIe connector P1 performs data transfers at the rate of 5.0 GT/s for Gen2 applications. The PCIe clock is routed as a 100Ω differential pair. The PCIe transmit and receive signal data paths are routed with a differential characteristic impedance of $85 \pm 10\%$ with an insertion loss of <4 dB up to 8 GHz. The XCZU9EG-L2FFVB1156E (-2 speed grade) device included with the ZCU102 board supports up to Gen3 x4. The PCIe reference clock output is wired to the P1 connector. PCIE_SLOT_CLK_P is connected to clock driver U69 Si5341B pin 38, and the _N net is connected to pin 37. The PCIe clock circuit is shown in Figure 3-8, page 47. PCIe 4-lane connector P1 is shown in Figure 3-38.

The ZCU102 board's PCIe Host connector supports power requirements consistent with the PCI Express® Card Electromechanical Specification Revision 2.0 PCIe add-in cards up to 25W max (2.1A max on PCIe +12V and 3.0A max on PCIe +3.3V).

X16545-071817

Figure 3-38: PCle Connector P1

The 4-lane PCle connector lane TX/RX nets are wired to the MPSoC U1 PS GTR Bank 505 transceiver channels through four 2-to-1 Pericom PI2DBS6212 [Ref 22] high speed multiplexers.

FPGA Mezzanine Card Interface

[Figure 2-1, callouts 31, 32]

The ZCU102 evaluation board supports the VITA 57.1 FPGA mezzanine card (FMC) specification [Ref 24] by providing subset implementations of high pin count connectors at J5 (HPC0) and J4 (HPC1). HPC connectors use a 10 x 40 form factor, populated with 400 pins. The connectors are keyed so that a mezzanine card, when installed in either of these FMC connectors on the ZCU102 evaluation board, faces away from the board.

FMC HPC0 Connector J5

[Figure 2-1, callout 31]

The FMC connector at J5 (HPC0) implements a subset of the full FMC HPC connectivity:

- 68 single-ended, or 34 differential user-defined pairs (34 LA pairs: LA[00:33])
- Eight GTH transceiver DP differential pairs
- Two GBTCLOCK differential clocks
- 159 ground and 15 power connections

The ZCU102 board FMC VADJ voltage VADJ_FMC_BUS for the J5 (HPC0) and J4 (HPC1) FMC connectors is determined by the MAX15301 U63 voltage regulator described in [ZCU102 Board Power System](#). The valid values of the VADJ_FMC rail are 1.2V, 1.5V, and 1.8V. The HPC0 J5 connections to XCZU9EG U1 are shown in [Table 3-44](#) through [Table 3-48](#).

FMC HPC1 Connector J4

[Figure 2-1, callout 32]

The FMC connector at J4 (HPC1) implements a subset of the full FMC HPC connectivity:

- 60 single-ended, or 30 differential user-defined pairs (LA[00:29])
- Eight GTH transceiver DP differential pairs
- Two GBTCLK differential clocks

- 159 ground and 15 power connections

The ZCU102 board FMC VADJ voltage VADJ_FMC_BUS for the J5 (HPC0) and J4 (HPC1) FMC connectors is determined by the MAX15301 U63 voltage regulator described in [ZCU102 Board Power System](#). The valid values of the VADJ_FMC rail are 1.2V, 1.5V, and 1.8V. The HPC1 J4 connections to XCZU9EG U1 are shown in [Table 3-49](#) through [Table 3-53](#).

Cooling Fan Connector

[Figure 2-1, near callout 42]

The XCZU9EG U1 cooling fan connector is shown in Figure 3-39. The fan turns on when the ZCU102 is powered up.

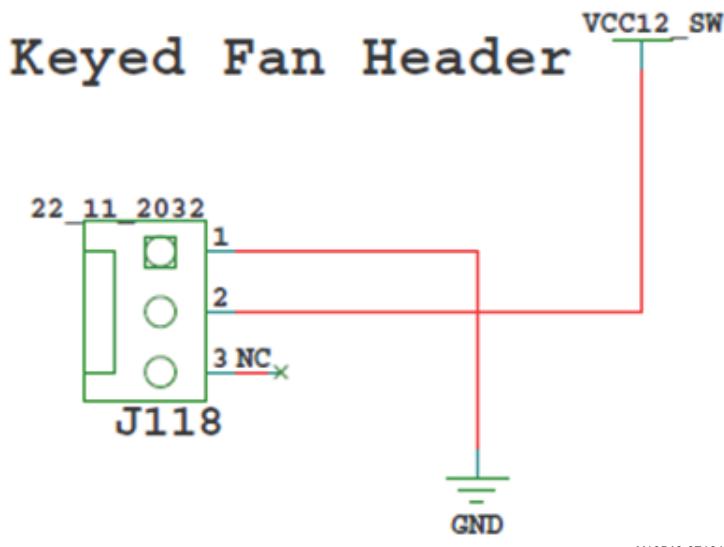

Figure 3-39: ZCU102 12V Fan Header

VADJ_FMC Power Rail

The ZCU102 evaluation board implements the ANSI/VITA 57.1 section 5.5.1 IPMI support functionality. The power control of the V_{ADJ_FMC} power rail is managed by the U41 system controller. This rail powers both the FMC HPC0 (J5) and the FMC HPC1 (J4) V_{ADJ} pins, as well as the XCZU9EG HP banks 65, 66 and 67. The valid values of the V_{ADJ_FMC} rail are 1.2V, 1.5V, and 1.8V.

At power on, the system controller detects if an FMC module is connected to each interface:

- If no cards are attached to the FMC ports, the V_{ADJ} voltage is set to 1.8V.
- When one FMC card is attached, its IIC EEPROM is read to find a V_{ADJ} voltage supported by both the ZCU102 board and the FMC module, within the available choices of 1.8V, 1.5V, 1.2V, and 0.0V.
- When two FMC cards are attached with differing V_{ADJ} requirements, V_{ADJ_FMC} is set to the lowest value compatible with the ZCU102 board and the FMC modules, within the available choices of 1.8V, 1.5V, 1.2V, and 0.0V.
- If no valid information is found in an FMC card IIC EEPROM, the V_{ADJ_FMC} rail is set to 0.0V.

The system controller user interface allows the FMC IPMI routine to be overridden and an explicit value can be set for the VADJ_FMC rail. Override mode is useful for FMC mezzanine cards that do not contain valid IPMI EPROM data defined by the ANSI/VITA57.1 specification.

TI MSP430 System Controller

[Figure 2-1, callout 18]

The ZCU102 board includes an on-board MSP430 with integrated Power Advantage demo and System Controller firmware. A Host PC resident system controller user interface (SCUI) is provided on the [ZCU102 web page](#). This GUI enables you to query and control select programmable features such as clocks, FMC functionality, power systems, and the Zynq UltraScale+ MPSoC GTR selection compatible with your design. The ZCU102 web page also includes a tutorial on the SCUI (XTP433) [\[Ref 12\]](#) and board setup instructions (XTP435) [\[Ref 13\]](#). The following briefly summarizes these instructions:

1. Ensure that the Silicon Labs VCP USB-UART drivers are installed.
2. Download the SCUI Host PC application.
3. Connect the micro-USB to ZCU102 USB-UART connector (J83).
4. Power-cycle the ZCU102.
5. Observe that SYSCTRL LED0 (DS47) blinks and LED1 DS46 is illuminated.
6. Launch the SCUI.

The SCUI GUI is shown in [Figure 3-40](#).

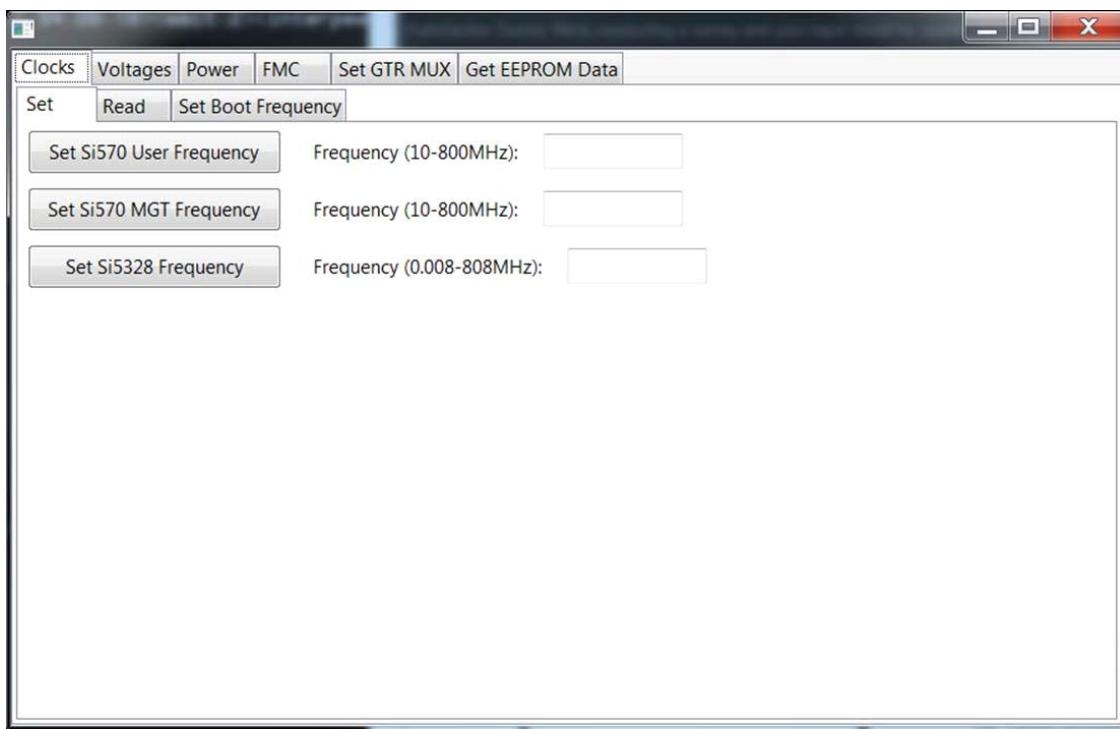

Figure 3-40: SCUI Graphical User Interface

On first use of the SCUI, go to the FMC > Set VADJ > Boot-up tab and click **USE FMC EEPROM Voltage**. The SCUI buttons gray-out during command execution and return to their original appearance when ready to accept a new command.

See the *System Controller Tutorial* (XTP433) and the *ZCU102 Software Install and Board Setup Tutorial* (XTP435) for more information on installing and using the System Controller utility.

The MSP430 uses ID resistor encoding to allow the System Controller utility awareness of which board type is active. See [Table 3-54](#) for the configuration of the ID encoding resistors R516 and R517.

Table 3-54: MSP430 Board ID Encoding

Zynq UltraScale+ Board	R516	R517
ZCU102	DNP	DNP
ZCU106	DNP	10K
Reserved	10K	DNP
Reserved	10K	10K

Note: The MSP430 firmware might be updated in the event new capability is added in the future. The MSP430 upgrade header, J164, is reserved for this purpose. Xilinx will provide information on the update procedure via future updates to XTP433 [\[Ref 12\]](#).

Switches

[Figure 2-1, callouts 26, 28, 30, and 44]

The ZCU102 board includes power, configuration and reset switches:

- SW1 Power On/Off slide switch (callout 28)
- SW5 (PS_PROG_B), active-Low pushbutton (callout 30)
- SW3 (SRST_B), active-Low pushbutton (callout 26)
- SW4 (POR_B), active-Low pushbutton (callout 26)
- SW6 U1 MPSoC PS bank 503 4-pole mode DIP switch (callout 44)

Power On/Off Slide Switch

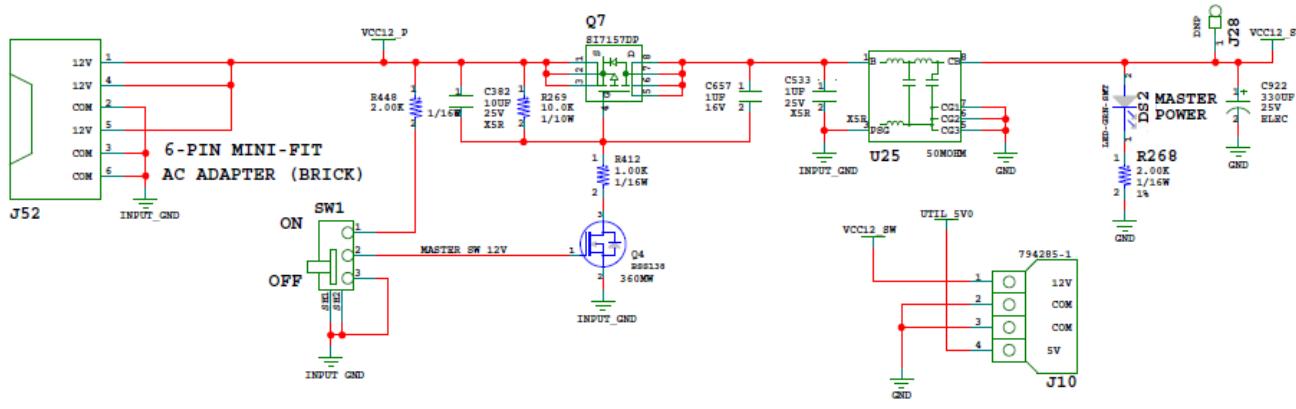

[Figure 2-1, callout 28]

The ZCU102 board power switch is SW1. Sliding the switch actuator from the *Off* to *On* position applies 12V power from J52, a 6-pin mini-fit connector. Green LED DS2 illuminates when the ZCU102 board power is on. See [ZCU102 Board Power System](#) for details on the on-board power system.

CAUTION! Do NOT plug a PC ATX power supply 6-pin connector into J52 on the ZCU102 board. The ATX 6-pin connector has a different pin-out than J52. Connecting an ATX 6-pin connector into J52 damages the ZCU102 board and voids the board warranty.

Figure 3-41 shows the power connector J52, power switch SW1, and LED indicator DS2.

X16548-071817

Figure 3-41: Power On/Off Switch SW1

Program_B Pushbutton

[Figure 2-1, callout 30]

PS_PROG_B pushbutton switch SW5 grounds the XCZU9EG MPSoC PS_PROG_B pin U21 when pressed (see [Figure 3-42](#)). This action clears programmable logic configuration, which the PS software can then act on. See the *Zynq UltraScale+ MPSoC Technical Reference Manual* (UG1085) [\[Ref 3\]](#) for information about Zynq UltraScale+ MPSoC configuration.

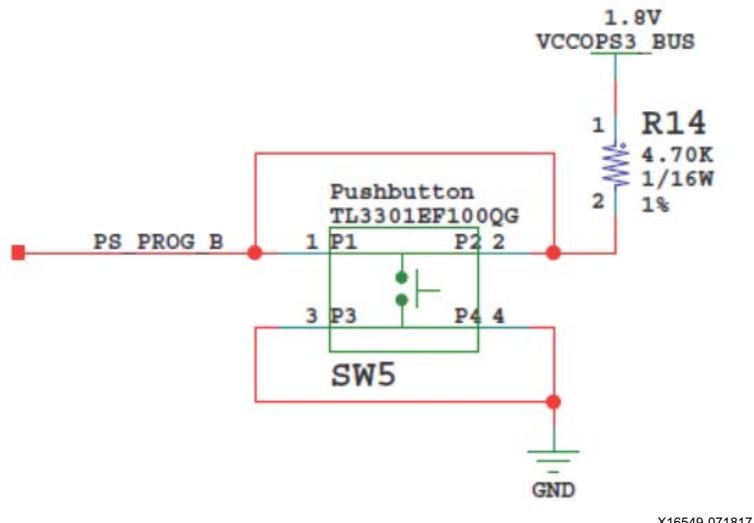

Figure 3-42: PS_PROG_B Pushbutton Switch SW5

System Reset Pushbuttons

[Figure 2-1, callout 26]

Figure 3-43 shows the reset circuitry for the processing system.

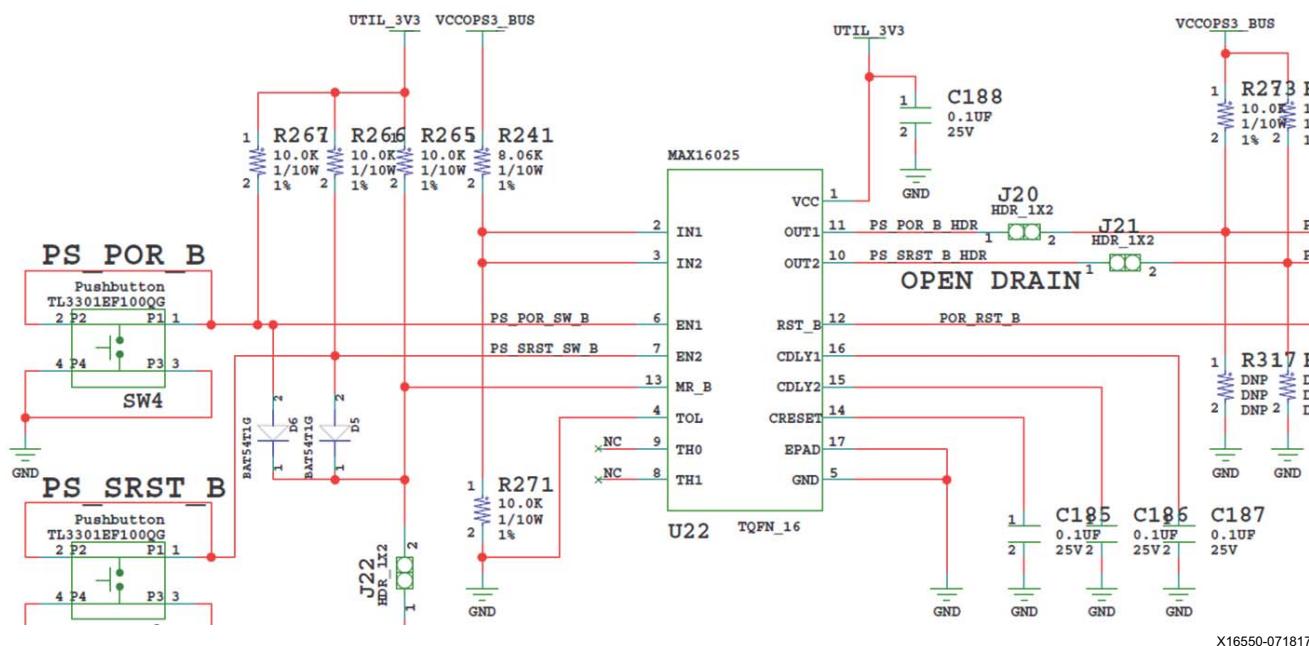

Figure 3-43: PS_SRST_B and POR_B Pushbutton Switches SW3 and SW4

PS_POR_B Reset

Depressing and then releasing pushbutton SW4 causes net PS_POR_B to strobe Low. This reset is used to hold the PS in reset until all PS power supplies are at the required voltage levels. It must be held Low through PS power-up. PS_POR_B should be generated by the power supply power-good signal. When the voltage at IN1 is below its threshold or EN1 (P.B. switch SW4 is pressed) goes Low, OUT1 (PS_POR_B) goes Low.

PS_SRST_B Reset

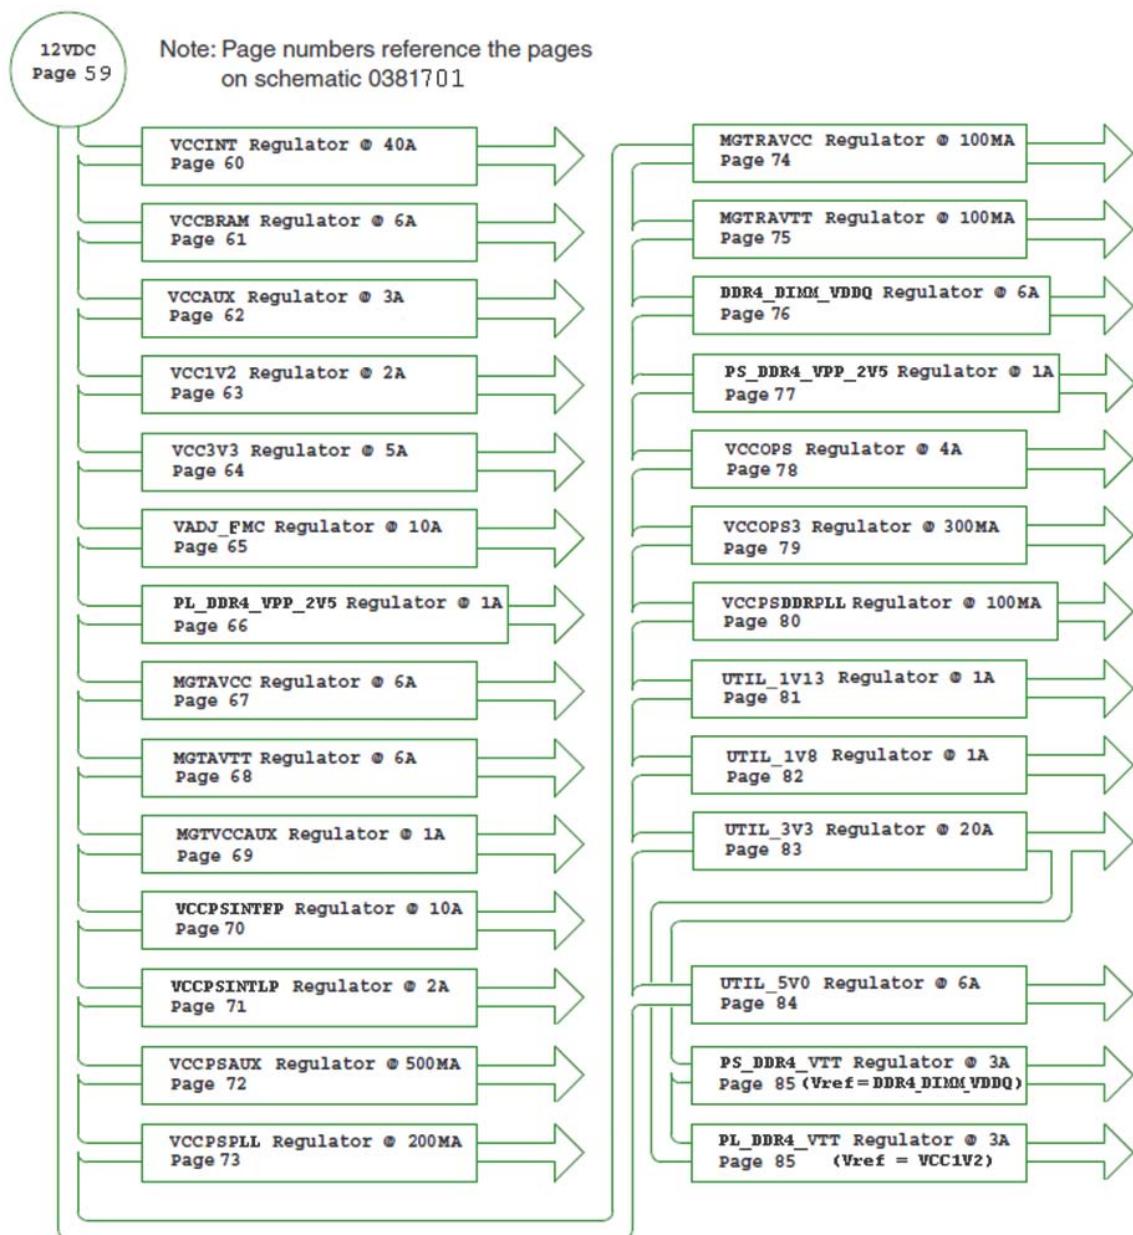

Depressing and then releasing pushbutton SW3 causes net PS_SRST_B to strobe Low. This reset is used to force a system reset. It can be tied or pulled High, and can be High during the PS supply power ramps. When the voltage at IN2 is below its threshold or EN2 (P.B. switch SW3 is pressed) goes Low, OUT2 (PS_SRST_B) goes Low.

Active-Low Reset Output RST_B asserts when any of the monitored voltages (IN_) falls below its respective threshold, any EN_ goes Low, or MR is asserted. RST_B remains asserted for the reset time-out period after all of the monitored voltages exceed their respective threshold, all EN_ are High, all OUT_ are high, and MR is deasserted. See the *Zynq UltraScale+ MPSoC Technical Reference Manual (UG1085)* [Ref 3] for information for information concerning the resets.

ZCU102 Board Power System

[Figure 2-1, callout 34]

The ZCU102 hosts a Maxim PMBus based power system. Each individual Maxim MAX20751EKX, MAX15301, or MAX15303 voltage regulator has a PMBus interface. Figure 3-44 shows the ZCU102 power system block diagram.

X16551-071817

Figure 3-44: ZCU102 Power System Block Diagram

The ZCU102 evaluation board uses power regulators and PMBus compliant POL controllers from Maxim Integrated Circuits [Ref 23] to supply the core and auxiliary voltages listed in [Table 3-55](#). The schematic page references are to 0381701.

Table 3-55: ZCU102 Power System Devices

The FMC HPC0 (J5) and FMC HPC1 (J4) VADJ pins are wired to the programmable rail VADJ_FMC_BUS. The VADJ_FMC_BUS rail is programmed to 1.80V by default. The VADJ_FMC derivative rail powers the XCZU9EG HP banks 64 - 67 (refer to [Table 3-2, page 26](#)).

Documentation describing PMBUS programming for the Maxim InTune power controllers is available at the Maxim website [\[Ref 23\]](#). The PCB layout and power system design meets the recommended criteria described in the *UltraScale Architecture PCB Design User Guide* (UG583) [\[Ref 4\]](#).

Monitoring Voltage and Current

Voltage and current monitoring and control are available for the Maxim power system controllers through the Maxim PowerTool graphical user interface. The on-board Maxim InTune power controllers listed in [Table 3-55](#) are accessed through the 2x8 keyed shrouded PMBus connector J84, which is provided for use with the Maxim PowerTool USB cable (Maxim part number MAXPOWERTOOL001#), which can be ordered from the Maxim website [\[Ref 23\]](#). The associated Maxim PowerTool GUI can be downloaded from the Maxim website. This is the simplest and most convenient way to monitor the voltage and current values for the Maxim PMBus programmed power rails listed in [Table 3-55](#).

Each PMBus programmable Maxim controller programmable is capable of reporting the voltage and current of its controlled rail to the Maxim GUI for display to the user. A subset of the programmable rails and two fixed rails have a TI INA226 PMBus power monitor circuit with connections to the rail sense net and taps on a series current sense resistor. This arrangement permits the INA226 to report the sensed parameters on the PMBus. The subset of rails configured with the INA226 power monitors is shown in [Table 3-56](#).

Table 3-56: ZCU102 Power Rails with INA226 Power Monitors

Device Type	Ref. Des.	PMBus Address	Power Rail Net Name	INA226 Address	Schematic Page
MAX15301	U47	0x13	VCCINT	PL: 0x40	60
MAX15303	U7	0x14	VCCBRAM	PL: 0x41	61
MAX15303	U6	0x15	VCCAUX	PL: 0x42	62
MAX15303	U10	0x16	VCC1V2	PL: 0x43	63

MAX15301	U46	0x0A	VCCPSINTFP	PS: 0x40	70
MAX15303	U4	0x0B	VCCPSINTLP	PS: 0x41	71
MAX8869E	U3	NA	VCCPSAUX	PS: 0x42	72
MAX8869E	U17	NA	VCCPSPLL	PS: 0x43	73
MAX8869E	U5	NA	MGTRAVCC	PS: 0x44	74
MAX8869E	U12	NA	MGTRAVTT	PS: 0x45	75
MAX15303	U13	0x10	VCCOPS	PS: 0x47	78
MAX8869E	U31	NA	VCCOPS3	PS: 0x4A	79
MAX8869E	U30	NA	VCCPSDDRPLL	PS: 0x4B	80

As noted in the [I2C0 \(MIO 14-15\)](#), the I2C0 bus provides access to the PMBus power controllers and PS-side and PL-side INA226 power monitors via the U60 PCA9544A bus switch. All PMBus controlled Maxim regulators are tied to the MAXIM_PMBUS, while the INA226 power monitors are separated on to PS_PMBUS and PL_PMBUS.

[Figure 3-17, page 57](#) and [Table 3-19, page 58](#) document the I2C0 bus access path to the Maxim PMBus controllers and INA226 power monitor op amps. Also refer to schematic 0381701.

The MPSOC core related power rail measurements (PL_PMBUS) and PS related power measurements (PS_PMBUS) are accessible to the system controller and PL logic through their respective I2C0 bus connections. These measurements are displayed in the system controller menu selections. The Maxim controller PMBus is also accessible by the system controller, which can also display the rail voltage measurement made by its sourcing Maxim controller. User IP in the PL can access the same set of PMBus resident devices through the logic I2C0 connections.

VITA 57.1 FMC Connector Pinouts

Overview

[Figure A-1](#) shows the pinout of the FPGA mezzanine card (FMC) high pin count (HPC) connector defined by the VITA 57.1 FMC specification. For a description of how the ZCU102 evaluation board implements the FMC specification, see [FPGA Mezzanine Card Interface](#), [FMC HPC0 Connector J5](#), and [FMC HPC1 Connector J4](#).

Figure A-1: FMC HPC Connector Pinout

Xilinx Design Constraints

Overview

The Xilinx design constraints (XDC) file template for the ZCU102 board provides for designs targeting the ZCU102 evaluation board. Net names in the constraints correlate with net names on the latest ZCU102 evaluation board schematic. Identify the appropriate pins and replace the net names with net names in the user RTL. See the *Vivado Design Suite User Guide: Using Constraints* (UG903) [Ref 10] for more information.

The FMC connectors J5 (HPC0) and J4 (HPC1) are connected to MPSoC banks powered by the variable voltage V_{AJ_FMC} . Because different FMC cards implement different circuitry, the FMC bank I/O standards must be uniquely defined by each customer.

IMPORTANT: The XDC file can be accessed on the [Zynq UltraScale+ MPSoC ZCU102 Evaluation Kit website](#).

Regulatory and Compliance Information

Overview

This product is designed and tested to conform to the European Union directives and standards described in this section.

[ZCU102 Evaluation Kit — Master Answer Record 66752](#)

For Technical Support, open a [Support Service Request](#).

CE Directives

2006/95/EC, *Low Voltage Directive (LVD)*

2004/108/EC, *Electromagnetic Compatibility (EMC) Directive*

CE Standards

EN standards are maintained by the European Committee for Electrotechnical Standardization (CENELEC). IEC standards are maintained by the International Electrotechnical Commission (IEC).

Electromagnetic Compatibility

EN 55022:2010, *Information Technology Equipment Radio Disturbance Characteristics – Limits and Methods of Measurement*

EN 55024:2010, *Information Technology Equipment Immunity Characteristics – Limits and Methods of Measurement*

This is a Class A product. In a domestic environment, this product can cause radio interference, in which case the user might be required to take adequate measures.

Safety

IEC 60950-1:2005, *Information technology equipment – Safety, Part 1: General requirements*

EN 60950-1:2006, *Information technology equipment – Safety, Part 1: General requirements*

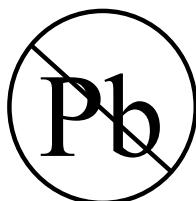

Markings

In August of 2005, the European Union (EU) implemented the EU WEEE Directive 2002/96/EC and later the WEEE Recast Directive 2012/19/EU requiring Producers of electronic and electrical equipment (EEE) to manage and finance the collection, reuse, recycling and to appropriately treat WEEE that the Producer places on the EU market after August 13, 2005. The goal of this directive is to minimize the volume of electrical and electronic waste disposal and to encourage re-use and recycling at the end of life.

Xilinx has met its national obligations to the EU WEEE Directive by registering in those countries to which Xilinx is an importer. Xilinx has also elected to join WEEE Compliance Schemes in some countries to help manage customer returns at end-of-life.

If you have purchased Xilinx-branded electrical or electronic products in the EU and are intending to discard these products at the end of their useful life, please do not dispose of them with your other household or municipal waste. Xilinx has labeled its branded electronic products with the WEEE Symbol to alert our customers that products bearing this label should not be disposed of in a landfill or with municipal or household waste in the EU.

This product complies with Directive 2002/95/EC on the restriction of hazardous substances (RoHS) in electrical and electronic equipment.

This product complies with CE Directives 2006/95/EC, *Low Voltage Directive (LVD)* and 2004/108/EC, *Electromagnetic Compatibility (EMC) Directive*.

Additional Resources and Legal Notices

Xilinx Resources

For support resources such as Answers, Documentation, Downloads, and Forums, see [Xilinx Support](#).

Solution Centers

See the [Xilinx Solution Centers](#) for support on devices, software tools, and intellectual property at all stages of the design cycle. Topics include design assistance, advisories, and troubleshooting tips.

Documentation Navigator and Design Hubs

Xilinx® Documentation Navigator provides access to Xilinx documents, videos, and support resources, which you can filter and search to find information. To open the Xilinx Documentation Navigator (DocNav):

- From the Vivado® IDE, select **Help > Documentation and Tutorials**.
- On Windows, select **Start > All Programs > Xilinx Design Tools > DocNav**.
- At the Linux command prompt, enter `docnav`.

Xilinx Design Hubs provide links to documentation organized by design tasks and other topics, which you can use to learn key concepts and address frequently asked questions. To access the Design Hubs:

- In the Xilinx Documentation Navigator, click the **Design Hubs View** tab.
- On the Xilinx website, see the [Design Hubs](#) page.

Note: For more information on Documentation Navigator, see the [Documentation Navigator](#) page on the Xilinx website.

Please Read: Important Legal Notices

The information disclosed to you hereunder (the "Materials") is provided solely for the selection and use of Xilinx products. To the maximum extent permitted by applicable law: (1) Materials are made available "AS IS" and with all faults, Xilinx hereby DISCLAIMS ALL WARRANTIES AND CONDITIONS, EXPRESS, IMPLIED, OR STATUTORY, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY, NON-INFRINGEMENT, OR FITNESS FOR ANY PARTICULAR PURPOSE; and (2) Xilinx shall not be liable (whether in contract or tort, including negligence, or under any other theory of liability) for any loss or damage of any kind or nature related to, arising under, or in connection with, the Materials (including your use of the Materials), including for any direct, indirect, special, incidental, or consequential loss or damage (including loss of data, profits, goodwill, or any type of loss or damage suffered as a result of any action brought by a third party) even if such damage or loss was reasonably foreseeable or Xilinx had been advised of the possibility of the same. Xilinx assumes no obligation to correct any errors contained in the Materials or to notify you of updates to the Materials or to product specifications. You may not reproduce, modify, distribute, or publicly display the Materials without prior written consent. Certain products are subject to the terms and conditions of Xilinx's limited warranty, please refer to Xilinx's Terms of Sale which can be viewed at <https://www.xilinx.com/legal.htm#tos>; IP cores may be subject to warranty and support terms contained in a license issued to you by Xilinx. Xilinx products are not designed or intended to be fail-safe or for use in any application requiring fail-safe performance; you assume sole risk and liability for use of Xilinx products in such critical applications, please refer to Xilinx's Terms of Sale which can be viewed at <https://www.xilinx.com/legal.htm#tos>.

AUTOMOTIVE APPLICATIONS DISCLAIMER

AUTOMOTIVE PRODUCTS (IDENTIFIED AS "XA" IN THE PART NUMBER) ARE NOT WARRANTED FOR USE IN THE DEPLOYMENT OF AIRBAGS OR FOR USE IN APPLICATIONS THAT AFFECT CONTROL OF A VEHICLE ("SAFETY APPLICATION") UNLESS THERE IS A SAFETY CONCEPT OR REDUNDANCY FEATURE CONSISTENT WITH THE ISO 26262 AUTOMOTIVE SAFETY STANDARD ("SAFETY DESIGN"). CUSTOMER SHALL, PRIOR TO USING OR DISTRIBUTING ANY SYSTEMS THAT INCORPORATE PRODUCTS, THOROUGHLY TEST SUCH SYSTEMS FOR SAFETY PURPOSES. USE OF PRODUCTS IN A SAFETY APPLICATION WITHOUT A SAFETY DESIGN IS FULLY AT THE RISK OF CUSTOMER, SUBJECT ONLY TO APPLICABLE LAWS AND REGULATIONS GOVERNING LIMITATIONS ON PRODUCT LIABILITY.
